Foreword	v
1 Scope.....	1
1.1 General	1
1.2 Application of the core data elements	1
1.3 Types of data elements defined by this part of ISO 28005.....	2
1.4 Structure of the data element descriptions	3
2 Normative references.....	3
3 Terms, definitions and abbreviated terms.....	4
3.1 Terms and definitions	4
3.2 Abbreviated terms	5
4 General provisions	6
4.1 Use of XML name space	6
4.2 Principle for creating tag names in a message file.....	6
4.3 Structure of data type definitions	6
4.4 Principles for defining enumerated types.....	7
4.5 Character sets for data fields.....	7
4.6 No use of XML attributes	7
4.7 Empty tags	8
4.8 Defaults for minOccurs and maxOccurs.....	8
5 Adapted XSD data types	8
5.1 Introduction.....	8
5.2 epc:anyURI – Generalized URI	8
5.3 epc:boolean – Boolean flag.....	8
5.4 epc:date – General date	8
5.5 epc:dateTime – Time and date, with time zone	9
5.6 epc:decimal – Decimal number.....	9
5.7 epc:duration – Time duration	10
5.8 epc:int – Integer number.....	10
5.9 epc:string – General string.....	10
5.10 epc:token – Computer-understandable string	10
6 General data types	11
6.1 Introduction.....	11
6.2 epc:AttachmentType – Reference to an attached document.....	11
6.3 epc>ContactInfoType – Contact information	11
6.4 epc:CommunicationNumberType – Communication number information	12
6.5 epc:CountryCodeContentType – Country identification.....	12
6.6 epc:GenderContentType – Enumeration type for Male/Female.....	12
6.7 epc:MeasureType – A physical measurement	13
6.8 epc:NameType – Name of person.....	13

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 28005-2 was prepared by Technical Committee ISO/TC 8, *Ships and marine technology*.

This first edition of ISO 28005-2 cancels and replaces ISO/PAS 28005-2:2009 which has been technically revised.

ISO 28005 consists of the following parts, under the general title *Security management systems for the supply chain — Electronic port clearance (EPC)*:

- *Part 2: Core data elements*

The following part is under preparation:

- *Part 1: Message structures*
