Glass in building — Glass products for structural sealant glazing —

Part 1: Supported and unsupported monolithic and multiple glazing

Verre dans la construction — Produits verriers pour vitrage extérieur collé —

Partie 1: Vitrages monolithiques ou multiples, supportés ou non supportés

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Symbols and abbreviated terms	6
5 Principle	8
6 Required characteristics of glass products	10
6.1 Appropriate glass products	10
6.2 Dimensional tolerances	11
6.3 Glass shapes	12
6.4 Corners, notches and holes	12
7 Verification of the suitability of glass products for use in SSG systems when exposed to ultra-violet (UV) radiation.....	13
7.1 General	13
7.2 Insulating glass unit (IGU).....	13
7.3 Laminated glass or monolithic glass — Situation 3 (see Figure 3)	15
7.4 Assessment of the adhesion between the sealant and the glass	15
8 Design.....	16
8.1 Calculation of the thickness of the glass.....	16
8.2 Calculation of the height of the outer sealant of the IGU for supported and unsupported glazing	16
8.3 Calculation of the height of the outer sealant of the IGU for unsupported glazing	20
Annex A (informative) Assembly requirement.....	21
Annex B (normative) Structural and/or ultra-violet (UV) -resistant sealant (for use with structural sealant glazing and/or IGUs with exposed seals)	26
Annex C (normative) Evaluation of tests results.....	42
Annex D (normative) Shear at 23 °C — Test method	46
Annex E (normative) Factory production control (FPC) requirements for sealants.....	48
Annex F (normative) Outer seal of an IGU — Category differentiation.....	53
Annex G (normative) Formation of bubbles.....	56
Annex H (informative) Sealing, structural bonding and UV resistance schematic illustrations	57
Annex I (normative) Initial testing of the bonding of sealant to a non-glass substrate	60
Bibliography.....	62

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 28728-1 was prepared by Technical Committee ISO/TC 160, *Glass in building*, Subcommittee SC 2, *Use considerations*.

ISO 28728 consists of the following parts, under the general title *Glass in building — Glass products for structural sealant glazing*:

- *Part 1: Supported and unsupported monolithic and multiple glazing*
- *Part 2: Assembly rules*
