Foreword ..... **v**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Test methods **4**

5 Test equipment **4**
5.1 General 4
5.2 Drum specifications 4
5.2.1 Diameter 4
5.2.2 Surface 4
5.2.3 Width 5
5.3 Measuring rim 5
5.4 Load, alignment, control and instrumentation accuracies 5
5.5 Thermal environment 5
5.5.1 Reference conditions 5
5.5.2 Alternative conditions 5

6 Test conditions **5**
6.1 General 5
6.2 Test speeds 5
6.3 Test load 6
6.4 Test inflation pressure 6
6.5 Duration and speed 6
6.6 Optional test conditions 6

7 Test procedure **6**
7.1 General 6
7.2 Thermal conditioning 6
7.3 Pressure adjustment 7
7.4 Warm-up 7
7.5 Measurement and recording 7
7.6 Measurement of parasitic losses 8
7.6.1 General 8
7.6.2 Skim test reading 8
7.6.3 Deceleration method 8
7.7 Allowance for machines exceeding σ_m criterion 9

8 Data interpretation **9**
8.1 Determination of parasitic losses 9
8.1.1 General 9
8.1.2 Force method at tyre spindle 9
8.1.3 Torque method at drum axis 10
8.1.4 Power method at drum axis 10
8.1.5 Deceleration method 10
8.2 Rolling resistance calculation 10
8.2.1 General 10
8.2.2 Force method at tyre spindle 10
8.2.3 Torque method at drum axis 11
8.2.4 Power method at drum axis 11
8.2.5 Deceleration method 11

9 Data analysis **12**
9.1 Rolling resistance coefficient 12
9.2 Temperature correction 12
9.3 Drum diameter correction 12
9.4 Measurement result 13

10.2 Conditions for reference machine 14
10.3 Conditions for candidate machine 14
10.4 Alignment tyre requirements 14
10.5 Alignment procedure 15

Annex A (normative) **Test equipment tolerances** **17**

Annex B (informative) **Measurement methods of moment of inertia for drum and tyre assembly — Deceleration method** **19**

Annex C (informative) **Test rim runout** **23**

Annex D (informative) **Publications of tyre standards** **24**

Annex E (informative) **Example for larger truck bus warm-up duration** **25**

Annex F (informative) **Example for machine drift evaluation** **26**

Annex G (informative) **Optional test conditions** **29**

Bibliography **31**

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by ISO/TC 31, *Tyres, rims and valves*.

This third edition cancels and replaces the second edition (ISO 28580:2018), which has been technically revised.

The main change is as follows:

— addition of Annex G with optional test conditions regarding sensitivity to test speed, tyre load and inflation pressure.

Any feedback or questions on this document should be directed to the user’s national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
