Second edition
2010-02-15

Surface active agents — Detergents — Determination of cationic-active matter content —

Part 2: Cationic-active matter of low molecular mass (between 200 and 500)

*Agents de surface — Détergents — Détermination de la teneur en
matière active cationique —*

*Partie 2: Matière active cationique à faible masse moléculaire (entre
200 et 500)*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 2871-2 was prepared by Technical Committee ISO/TC 91, *Surface active agents*.

This second edition cancels and replaces the first edition (ISO 2871-2:1990), of which it constitutes a minor revision.

ISO 2871 consists of the following parts, under the general title *Surface active agents — Detergents — Determination of cationic-active matter content*:

- *Part 1: High-molecular-mass cationic-active matter*
- *Part 2: Cationic-active matter of low molecular mass (between 200 and 500)*
