Fourth edition
2018-07

Welding and allied processes — Determination of hydrogen content in arc weld metal

*Soudage et techniques connexes — Détermination de la teneur en
hydrogène dans le métal fondu pour le soudage à l'arc*

Reference number
ISO 3690:2018(E)

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	1
5 Test procedures	2
5.1 Production of weld specimens	2
5.1.1 Summary	2
5.1.2 Welding fixture	2
5.1.3 Test piece assemblies	3
5.1.4 Welding and test piece storage	4
5.1.5 Recording of data	5
5.2 Welding procedures for the production of weld specimens	5
5.2.1 Summary	5
5.2.2 Manual metal arc welding	6
5.2.3 Submerged arc welding	7
5.2.4 Tubular cored electrode with or without gas shield and wire electrode with gas shield	10
5.3 Measurement of hydrogen in the test weld	12
5.3.1 General	12
5.3.2 Displacement of mercury method	12
5.3.3 Thermal conductivity detector method	14
5.3.4 Calibration	16
5.3.5 Linearity	17
5.3.6 Calculation and expression of results	17
5.3.7 Reporting of results	18
5.4 Measurement of total hydrogen content in the weld metal — Rapid methods	18
5.5 Rounding procedure	18
Annex A (informative) Recommendations and restrictions in regard to older methods of measurement using mercury	20
Annex B (informative) Recommendations and restrictions in regard to older methods of measurement using glycerine	21
Annex C (informative) Accuracy and reproducibility	22
Bibliography	23

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by IIW, International Institute of Welding, Commission II.

Any feedback, question or request for official interpretation related to any aspect of this document should be directed to IIW via your national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

This fourth edition cancels and replaces the third edition (ISO 3690:2012), which has been technically revised. The main changes compared to the previous edition are as follows:

- an additional specimen size D has been added;
- changes have been made in required diffusion times for high temperature tests, see [5.3.3.4](#), [5.3.4](#) and [Table 5](#).
