Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is Project Committee ISO/PC 278, *Anti-bribery management systems*.

Introduction

Bribery is a widespread phenomenon. It raises serious social, moral, economic and political concerns, undermines good governance, hinders development and distorts competition. It erodes justice, undermines human rights and is an obstacle to the relief of poverty. It also increases the cost of doing business, introduces uncertainties into commercial transactions, increases the cost of goods and services, diminishes the quality of products and services, which can lead to loss of life and property, destroys trust in institutions and interferes with the fair and efficient operation of markets.

Governments have made progress in addressing bribery through international agreements such as the Organization for Economic Co-operation and Development Convention on Combating Bribery of Foreign Public Officials in International Business Transactions^[15] and the United Nations Convention against Corruption^[14] and through their national laws. In most jurisdictions, it is an offence for individuals to engage in bribery and there is a growing trend to make organizations, as well as individuals, liable for bribery.

However, the law alone is not sufficient to solve this problem. Organizations have a responsibility to proactively contribute to combating bribery. This can be achieved by an anti-bribery management system, which this document is intended to provide, and through leadership commitment to establishing a culture of integrity, transparency, openness and compliance. The nature of an organization's culture is critical to the success or failure of an anti-bribery management system.

A well-managed organization is expected to have a compliance policy supported by appropriate management systems to assist it in complying with its legal obligations and commitment to integrity. An anti-bribery policy is a component of an overall compliance policy. The anti-bribery policy and supporting management system helps an organization to avoid or mitigate the costs, risks and damage of involvement in bribery, to promote trust and confidence in business dealings and to enhance its reputation.

This document reflects international good practice and can be used in all jurisdictions. It is applicable to small, medium and large organizations in all sectors, including public, private and not-for-profit sectors. The bribery risks facing an organization vary according to factors such as the size of the organization, the locations and sectors in which the organization operates, and the nature, scale and complexity of the organization's activities. This document specifies the implementation by the organization of policies, procedures and controls which are reasonable and proportionate according to the bribery risks the organization faces. [Annex A](#) provides guidance on implementing the requirements of this document.

Conformity with this document cannot provide assurance that no bribery has occurred or will occur in relation to the organization, as it is not possible to completely eliminate the risk of bribery. However, this document can help the organization implement reasonable and proportionate measures designed to prevent, detect and respond to bribery.

In this document, the following verbal forms are used:

- "shall" indicates a requirement;
- "should" indicates a recommendation;
- "may" indicates a permission;
- "can" indicates a possibility or a capability.

Information marked as "NOTE" is for guidance in understanding or clarifying the associated requirement.

This document conforms to ISO's requirements for management system standards. These requirements include a high level structure, identical core text, and common terms with core definitions, designed to benefit users implementing multiple ISO management system standards. This document can be used in conjunction with other management system standards (e.g. ISO 9001, ISO 14001, ISO/IEC 27001 and ISO 19600) and management standards (e.g. ISO 26000 and ISO 31000).
