8.6.3 Data sources................................................................................................................................ 20
8.7 Annual frequency of flood events.................................................................................................. 20
8.7.1 General........................................................................................................................................ 20
8.7.2 Indicator requirements............................................................................................................... 20
8.7.3 Data sources................................................................................................................................ 21
8.8 Percentage of city land area covered by tree canopy................................................................. 21
8.8.1 General........................................................................................................................................ 21
8.8.2 Indicator requirements............................................................................................................... 21
8.8.3 Data sources................................................................................................................................ 21
8.9 Percentage of city surface area covered with high-albedo materials contributing to the mitigation of urban heat islands ................................................................. 21
8.9.1 General ............................................................................................................. 21
8.9.2 Indicator requirements ..................................................................................... 22
8.9.3 Data sources ..................................................................................................... 22

9 Finance ................................................................................................................... 22

9.1 Annual expenditure on upgrades and maintenance of city service assets as a percentage of total city budget ......................................................... 22
9.1.1 General ............................................................................................................. 22
9.1.2 Indicator requirements ..................................................................................... 22
9.1.3 Data sources ..................................................................................................... 22

9.2 Annual expenditure on upgrades and maintenance of storm water infrastructure as a percentage of total city budget ........................................ 23
9.2.1 General ............................................................................................................. 23
9.2.2 Indicator requirements ..................................................................................... 23
9.2.3 Data sources ..................................................................................................... 23

9.3 Annual expenditure allocated to ecosystem restoration in the city’s territory as a percentage of total city budget .............................................. 23
9.3.1 General ............................................................................................................. 23
9.3.2 Indicator requirements ..................................................................................... 24
9.3.3 Data sources ..................................................................................................... 24
9.3.4 Data interpretation ............................................................................................. 24

9.4 Annual expenditure on green and blue infrastructure as a percentage of total city budget ................................................................. 24
9.4.1 General ............................................................................................................. 24
9.4.2 Indicator requirements ..................................................................................... 24
9.4.3 Data sources ..................................................................................................... 25
9.4.4 Data interpretation ............................................................................................. 25

9.5 Annual expenditure on emergency management planning as a percentage of total city budget ................................................................. 25
9.5.1 General ............................................................................................................. 25
9.5.2 Indicator requirements ..................................................................................... 25
9.5.3 Data sources ..................................................................................................... 25

9.6 Annual expenditure on social and community services as a percentage of total city budget ................................................................. 26
9.6.1 General ............................................................................................................. 26
9.6.2 Indicator requirements ..................................................................................... 26
9.6.3 Data sources ..................................................................................................... 26
9.6.4 Data interpretation ............................................................................................. 26

9.7 Total allocation of disaster reserve funds as a percentage of total city budget ................................................................. 26
9.7.1 General ............................................................................................................. 26
9.7.2 Indicator requirements ..................................................................................... 27
9.7.3 Data sources ..................................................................................................... 27
9.7.4 Data interpretation ............................................................................................. 27

10 Governance ........................................................................................................... 27

10.1 Frequency with which disaster-management plans are updated ........................................................................................................ 27
10.1.1 General ............................................................................................................. 27
10.1.2 Indicator requirements ..................................................................................... 27
10.1.3 Data sources ..................................................................................................... 27

10.2 Percentage of essential city services covered by a documented continuity plan ................................................................................................. 28
10.2.1 General ............................................................................................................. 28
10.2.2 Indicator requirements ..................................................................................... 28
10.2.3 Data sources ..................................................................................................... 28
10.2.4 Data interpretation ............................................................................................. 28

10.3 Percentage of city electronic data with secure and remote back-up storage ................................................................................................. 29
10.3.1 General ............................................................................................................. 29
10.3.2 Indicator requirements ..................................................................................... 29
11 Health

11.1 Percentage of hospitals equipped with back-up electricity supply

11.1.1 General

11.1.2 Indicator requirements

11.1.3 Data sources

11.2 Percentage of population with basic health insurance

11.2.1 General

11.2.2 Indicator requirements

11.2.3 Data sources

11.3 Percentage of population that is fully immunized

11.3.1 General

11.3.2 Indicator requirements

11.3.3 Data sources

11.4 Number of infectious disease outbreaks per year

11.4.1 General

11.4.2 Indicator requirements

11.4.3 Data sources

11.4.4 Data interpretation

12 Housing

12.1 Capacity of designated emergency shelters per 100 000 population

12.1.1 General

12.1.2 Indicator requirements

12.1.3 Data sources

12.2 Percentage of buildings structurally vulnerable to high-risk hazards

12.2.1 General

12.2.2 Indicator requirements

12.2.3 Data sources

12.3 Percentage of residential buildings not in conformity with building codes and standards

12.3.1 General

12.3.2 Indicator requirements

12.3.3 Data sources

12.4 Percentage of damaged infrastructure that was "built back better" after a disaster

12.4.1 General

12.4.2 Indicator requirements

12.4.3 Data sources

12.4.4 Data interpretation

12.5 Annual number of residential properties flooded as a percentage of total residential properties in the city

12.5.1 General

12.5.2 Indicator requirements
13 **Population and social conditions** ................................................. 39
13.1 Vulnerable population as a percentage of city population .......... 39
13.1.1 General .............................................................................. 39
13.1.2 Indicator requirements ....................................................... 39
13.1.3 Data sources ..................................................................... 39
13.1.4 Data interpretation .............................................................. 39
13.2 Percentage of population enrolled in social assistance programmes .................................................. 40
13.2.1 General .............................................................................. 40
13.2.2 Indicator requirements ....................................................... 40
13.2.3 Data sources ..................................................................... 40
13.3 Percentage of population at high risk from natural hazards ........ 40
13.3.1 General .............................................................................. 40
13.3.2 Indicator requirements ....................................................... 40
13.3.3 Data sources ..................................................................... 41
13.4 Percentage of neighbourhoods with regular and open neighbourhood association meetings .................................................. 41
13.4.1 General .............................................................................. 41
13.4.2 Indicator requirements ....................................................... 41
13.4.3 Data sources ..................................................................... 41
13.5 Annual percentage of the city population directly affected by natural hazards .................................. 41
13.5.1 General .............................................................................. 41
13.5.2 Indicator requirements ....................................................... 42
13.5.3 Data sources ..................................................................... 42

14 **Recreation** .................................................................................. 42

15 **Safety** .............................................................................................. 42
15.1 Percentage of city population covered by multi-hazard early warning system .................................. 42
15.1.1 General .............................................................................. 42
15.1.2 Indicator requirements ....................................................... 42
15.1.3 Data sources ..................................................................... 43
15.2 Percentage of emergency responders who have received disaster response training ...................... 43
15.2.1 General .............................................................................. 43
15.2.2 Indicator requirements ....................................................... 43
15.2.3 Data sources ..................................................................... 43
15.3 Percentage of local hazard warnings issued by national agencies annually that are received in a timely fashion by the city .......................................................... 43
15.3.1 General .............................................................................. 43
15.3.2 Indicator requirements ....................................................... 43
15.3.3 Data sources ..................................................................... 44
15.4 Number of hospital beds in the city destroyed or damaged by natural hazards per 100 000 population .................................................. 44
15.4.1 General .............................................................................. 44
15.4.2 Indicator requirements ....................................................... 44
15.4.3 Data sources ..................................................................... 45

16 **Solid waste** ..................................................................................... 45
16.1 Number of active and temporary waste management sites available for debris and rubble per square kilometre .......................................................... 45
16.1.1 General .............................................................................. 45
16.1.2 Indicator requirements ....................................................... 45
16.1.3 Data sources ..................................................................... 45

17 **Sport and culture** ............................................................................. 45
18 Telecommunication
18.1 Percentage of emergency responders in the city equipped with specialized communication technologies able to operate reliably during a disaster event
18.1.1 General
18.1.2 Indicator requirements
18.1.3 Data sources

19 Transportation
19.1 Number of evacuation routes available per 100 000 population
19.1.1 General
19.1.2 Indicator requirements
19.1.3 Data sources

20 Urban/local agriculture and food security
20.1 Percentage of city population that can be served by city food reserves for 72 hours in an emergency
20.1.1 General
20.1.2 Indicator requirements
20.1.3 Data sources

21 Urban planning
21.1 Percentage of city area covered by publicly available hazard maps
21.1.1 General
21.1.2 Indicator requirements
21.1.3 Data sources

21.2 Pervious land areas and public space and pavement built with porous, draining materials as a percentage of city land area
21.2.1 General
21.2.2 Indicator requirements
21.2.3 Data sources
21.2.4 Data interpretation

21.3 Percentage of city land area in high-risk zones where risk-reduction measures have been implemented
21.3.1 General
21.3.2 Indicator requirements
21.3.3 Data sources

21.4 Percentage of city departments and utility services that conduct risk assessment in their planning and investment
21.4.1 General
21.4.2 Indicator requirements
21.4.3 Data sources

21.5 Annual number of critical infrastructures flooded as a percentage of critical infrastructure in the city
21.5.1 General
21.5.2 Indicator requirements
21.5.3 Data sources

21.6 Annual expenditure on water retention measures as a percentage of city prevention measures budget
21.6.1 General
21.6.2 Indicator requirements
21.6.3 Data requirements

22 Wastewater
23 Water
## 23.1 Indicator requirements

### 23.1.2 Data sources

### 23.1.3 Data interpretation

## 23.2 Percentage of city population that can be supplied with drinking water by alternative methods for 72 hours

### 23.2.1 General

### 23.2.2 Indicator requirements

### 23.2.3 Data sources

## 24 Reporting and record maintenance

### Annex A (informative) Typology of city hazards

### Annex B (informative) Mapping ISO 37123 indicators to the risk-management process

### Annex C (informative) Mapping ISO 37123 indicators to the disaster-management process

### Annex D (informative) UN Sustainable Development Goals (SDGs) and the Sendai Framework for Disaster Risk Reduction

### Annex E (informative) Mapping of ISO 37123 indicators to ISO 37101 issues and purposes

### Bibliography
Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO’s adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 268, Sustainable cities and communities.

Any feedback or questions on this document should be directed to the user’s national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
Introduction

Cities need indicators to establish their baseline, and measure and evaluate their performance. However, existing indicators are often not standardized, consistent or comparable over time or across cities. To address these challenges, a new series of International Standards is being developed to provide standardized indicators that enable a uniform approach to what is measured, and how that measurement is to be undertaken.

The first standard in this series, ISO 37120, has quickly become the international reference point for sustainable city indicators. While ISO 37120 contains a number of indicators of relevance to a city's resilience planning and assessment, the need for additional indicators for resilient cities has been identified, reflected in this document, as has the need for additional indicators for smart cities, developed in ISO 37122.

A resilient city is able to prepare for, recover from and adapt to shocks and stresses. Cities are increasingly confronted by shocks, including extreme natural or human-made events which result in loss of life and injury, material, economic, and/or environmental losses and impacts. These shocks can include but are not limited to floods, earthquakes, hurricanes, wildfires, volcanic eruptions, pandemics, chemical spills and explosions, terrorism, power outages, financial crises, cyber-attacks and conflicts. A resilient city is also able to manage and mitigate ongoing human and natural stresses in a city relating to environmental degradation (e.g. poor air and water quality), social inequality (e.g. chronic poverty and housing shortages) and economic instability (e.g. rapid inflation and persistent unemployment) that cause persistent negative impacts in a city.

A city's preparedness can be characterized by developing a detailed understanding of the risks to the city, by taking action to reduce vulnerability and exposure, and by enhancing the awareness and participation of individuals, households and businesses.

A resilient city is able to recover from shocks and stresses in a timely and efficient manner, with a focus on ensuring the continuity or rapid restoration of city services such as electricity, water, telecommunications, waste management, sanitation, food distribution, financial services and access to emergency services.

A resilient city is also a city that understands the necessity to adapt its systems and processes to ensure that they are as robust as possible in the face of shocks and stresses, building back better following extreme events, while focusing on the goal of restoring and ensuring long-term prosperity.

Resilience is both a core component and an essential enabler of sustainable development. This document is focused on resilience measurement as a major contribution to the sustainability of a city. The structure of the family of city indicators standards for sustainable cities and communities reflects this relationship between sustainable development, resilient development and smart development (see Figure 1).

Progress and transformation towards sustainable development through maintaining and improving city services and quality of life in the face of shocks and stresses is a core component of a resilient city. This document is therefore intended to be implemented in conjunction with ISO 37120.
The indicators in this document have been selected to make reporting as simple and inexpensive as possible, and therefore reflect an initial platform for reporting. The indicators have been developed to help cities:

a) prepare for, recover from and adapt to shocks and stresses;

b) learn from one another by allowing comparison across a wide range of performance measures, and by sharing good practices.

The indicators in this document can be used to track and monitor progress towards a resilient city, through the development of a city resilience strategy or when applying a city management system such as ISO 37101. While the indicators are structured around ISO themes that correspond to different sectors and services provided by cities, it is noted that the indicators can also be organized according to the risk management process (Annex B), the disaster management process (Annex C), the Sustainable Development Goals and the Sendai Framework for Disaster Risk Reduction (Annex D) and the ISO 37101 issues and purposes (Annex E). Furthermore, the typologies of hazards (Annex A) can assist cities in identifying the potential hazards that they face, which is relevant to many of the indicators contained in this document. It is also provided as a guide for helping identify peer cities facing similar hazards.

This document will support any and all global agreements that support sustainability and resilience. Agreements currently in place include, but are not limited to: the Sendai Framework for Disaster Risk Reduction[22], the New Urban Agenda, the 2030 Agenda (i.e. the United Nations Sustainable Development Goals[27]) and the Paris Agreement.

A city which conforms to this document does so in regard to measurement of indicators for city resilience in conformity with the definitions and methodologies as set out in this document, and may only claim conformity to that effect. This document does not provide a value judgement, threshold or target numerical value for the indicators, therefore conformity with this document does not confer a status in this regard.

It is acknowledged that cities may not have direct influence or control over factors governing some of these indicators, but the reporting is important for meaningful comparison and provides a general indication of resilience.

In this document, the following verbal forms are used:

— “shall” indicates a requirement;
— “should” indicates a recommendation;
— “may” indicates a permission;
— “can” indicates a possibility or a capability.
