## **Construction drawings — Designation systems —**

### **Part 3: Room identifiers**

*Dessins de bâtiment — Systèmes de désignation —  
Partie 3: Identificateurs de pièces*

Reference number  
ISO 4157-3:1998(E)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 4751-3 was prepared by Technical Committee ISO/TC 10, *Technical drawings, product definition and related documentation*, Subcommittee SC 8, *Construction documentation*.

ISO 4157 consists of the following parts, under the general title *Construction drawings — Designation systems*:

- *Part 1: Buildings and parts of buildings*
- *Part 2: Room names and numbers*
- *Part 3: Room identifiers*
