

First edition
2004-09-01

**Pulps — Laboratory wet disintegration —
Part 3:
Disintegration of mechanical pulps at
≥ 85 °C**

Pâtes — Désintégration humide en laboratoire —

Partie 3: Désintégration des pâtes mécaniques à ≥ 85 °C

Reference number
ISO 5263-3:2004(E)

Foreword	iv
1 Scope	1
2 Normative references	1
3 Definition	1
4 Apparatus	2
5 Preparation of test portion	2
6 Procedure	3
7 Test report	4
Annex A (normative) Construction of the Standard disintegrator	5
Annex B (normative) Checking the Standard disintegrator	7
Annex C (normative) Circulation disintegrator	8
Annex D (informative) The effect of latency in mechanical pulps	9
Bibliography	11

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 5263-3 was prepared by Technical Committee ISO/TC 6, *Paper, board and pulps*, Subcommittee SC 5, *Test methods and quality specifications for pulps*.

This first edition cancels and partially replaces ISO 5263:1995 which has been technically revised. In the revision, ISO 5263 has been divided into three parts; Part 1 which is applicable to chemical pulps, Part 2 which is applicable to mechanical pulps without latency and Part 3 which is applicable to mechanical pulps exhibiting latency. In Part 3, an informative Annex has been inserted describing the effect of latency in mechanical pulps.

ISO 5263 consists of the following parts, under the general title *Pulps — Laboratory wet disintegration*:

- *Part 1: Disintegration of chemical pulps*
- *Part 2: Disintegration of mechanical pulps at 20 °C*
- *Part 3: Disintegration of mechanical pulps at ≥ 85 °C*
