	Page
Foreword	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 General aspects	3
4.1 Design of sampling programme.....	3
4.2 Sampling point selection - Representativeness.....	3
4.3 Frequency and time of sampling.....	4
4.3.1 Number of samples.....	4
4.3.2 Sampling time for effluent stream.....	4
5 Sampling at specific locations	5
5.1 Sampling from sewers, channels and manholes.....	6
5.2 Sampling from waste water treatments plants.....	6
5.3 Sampling from industrial sites.....	7
5.4 Sampling from cooling systems.....	7
6 Main types of waste water sampling	8
6.1 Spot sampling.....	8
6.2 Composite sampling.....	8
7 Waste water sampling	9
7.1 General aspects.....	9
7.1.1 Preparation of the sampling campaign.....	9
7.1.2 Arrival on site.....	9
7.2 Composite sampling for waste water quality monitoring.....	10
7.2.1 General.....	10
7.2.2 Automatic composite sampling.....	10
7.2.3 Manual composite sampling.....	13
7.2.4 Manual sample reconstitution.....	13
7.3 Spot sampling in an effluent stream.....	14
7.3.1 General.....	14
7.3.2 Direct sampling.....	15
7.3.3 Indirect sampling.....	15
7.3.4 Automatic, remote start or event-triggered sampling.....	16
7.4 Spot sampling of tanks — planned discharges.....	16
8 Sampling equipment	17
8.1 General.....	17
8.2 Automatic sampler.....	17
8.3 Manual sampling equipment.....	18
8.3.1 General.....	18
8.3.2 Ballasted sample collector.....	18
8.3.3 Bucket, vertical water sampler.....	18
8.4 Tank sampling equipment.....	19
8.4.1 Mixing.....	19
8.4.2 Sampling equipment.....	19
9 Homogenization, preservation, transport and storage of samples	19
9.1 Homogenization of collected volume.....	19
9.2 Distribution of collected volume into laboratory bottles.....	20
9.3 Preservation and packaging of samples.....	21
9.4 Transportation and reception.....	21
9.4.1 General.....	21
9.4.2 Time.....	21
9.4.3 Temperature.....	21

9.5	Security and traceability of samples during storage and delivery	22
9.5.1	Routine samples	22
9.5.2	Samples which might be used for legal purposes	22
10	Quality assurance	22
10.1	Avoidance of contamination	22
10.2	Sample identification and records	23
10.3	Assurance and quality control	23
11	Reports	23
11.1	Analytical reports	23
11.2	Sampling protocols	24
12	Safety precautions	24
12.1	General	24
12.2	Personnel safety	25
12.3	Equipment safety	25
Annex A (informative) Examples of sampling from tanks		27
Annex B (informative) Advantages and disadvantages of main types of waste water sampling		30
Annex C (informative) Example of cleaning protocol — Sampling equipment		32
Annex D (informative) Example of field form — Waste water sampling		34
Annex E (informative) Choice of compatible materials for automatic samplers		36
Annex F (informative) Comparison of types of pumping: peristaltic pump (PP) and vacuum pump (VAP)		38
Annex G (informative) Type of distribution of collected volume into laboratory bottle		40
Annex H (informative) Quality control of sampling equipment		42
Annex I (informative) Bias and repeatability		44
Bibliography		45

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 147, *Water quality, SC 6, Sampling (general methods)*.

This second edition cancels and replaces the first edition (ISO 5667-10:1992), which has been technically revised. The main changes compared to the previous edition are as follows:

- integration of radioactive liquid effluent sampling and its specificities;
- integration of qualified spot sampling.

A list of all parts in the ISO 5667 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
