Third edition
2017-05

Equipment for crop protection — Spraying equipment —

Part 1: Test methods for sprayer nozzles

Matériel de protection des cultures — Équipement de pulvérisation — Partie 1: Méthodes d'essai des buses de pulvérisation

Foreword ... **v**

1 Scope ... **1**

2 Normative references ... **1**

3 Terms and definitions ... **1**

4 Measuring equipment ... **1**
4.1 General ... 1
4.2 Horizontal patternator ... 1
4.2.1 General ... 1
4.2.2 Groove characteristics ... 1
4.2.3 Upper part of the groove walls ... 5
4.2.4 Overall dimensions ... 6
4.2.5 Traversing systems ... 6
4.3 Distance ... 6
4.4 Pressure ... 6
4.5 Time ... 6
4.6 Flow rate ... 7
4.7 Angle ... 7
4.8 Temperature and humidity ... 7
4.9 Volume and mass ... 7
4.10 Air pressure ... 7
4.11 Standard laboratory horizontal spray boom ... 7

5 General test conditions ... **8**
5.1 General ... 8
5.2 Test liquids ... 8
5.2.1 Water ... 8
5.2.2 Abrasive liquid ... 9
5.3 Temperature and relative humidity ... 9
5.4 Nozzle flow rate setting ... 9

6 Determination of sprayer nozzle characteristics ... **9**
6.1 Nozzle sampling ... 9
6.1.1 General ... 9
6.1.2 Nozzle samples ... 9
6.2 Nozzle flow rate uniformity ... 9
6.2.1 General ... 9
6.2.2 Test liquid ... 10
6.2.3 Nozzle flow rate setting ... 10
6.2.4 Measurements ... 10
6.2.5 Results ... 10
6.3 Nozzle flow rate as a function of pressure adjustments ... 10
6.3.1 General ... 10
6.3.2 Test liquid ... 10
6.3.3 Nozzle flow rate settings ... 10
6.3.4 Measurements ... 11
6.3.5 Results ... 11
6.4 Spray distribution on a horizontal patternator ... 11
6.4.1 General ... 11
6.4.2 General test conditions ... 13
6.4.3 Test liquid ... 13
6.4.4 Nozzle flow rate settings ... 13
6.4.5 Nozzle orientation ... 14
6.4.6 Nozzle height ... 15
6.4.7 Measurements ... 15

6.4.8 Results 16
6.5 Nozzle flow rate and distribution changes due to abrasion (accelerated wear test) 16
6.5.1 General 16
6.5.2 Test liquid 16
6.5.3 Nozzle flow rate setting 16
6.5.4 Abrasion test duration 16
6.5.5 Measurements 17
6.5.6 Results 17
6.6 Spray angle 17
7 Test report 18
Annex A (informative) **Applicable tests by nozzle type 19**
Annex B (informative) **Horizontal patternator 21**
Annex C (informative) **Nozzle spray angle, spacing and height relationships for horizontal patternator testing 25**
Annex D (normative) **Specification of the aluminium oxide 26**
Annex E (informative) **Model test report for nozzles in accordance with ISO 5682-1 ..... 27**
Annex F (informative) **Reporting results for cone nozzles 33**
Annex G (informative) **Standard spray boom for testing multiple nozzles 34**
Bibliography 35

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 6, *Equipment for crop protection.*

This third edition cancels and replaces the second edition (ISO 5682-1:1996), which has been technically revised as follows:

— clarity for the construction of the patternator;

— addition of a multiple nozzle setup to nozzle test methods;

— broadening of the scope of nozzle types covered;

— removal of drop size measurement using a Petri dish;

— clarification on the methods;

— clarification on sampling;

— update of instrumentation;

— several new informative annexes.

A list of all the parts in the ISO 5682 series can be found on the ISO website.
