Third edition
2017-05

Equipment for crop protection — Spraying equipment —

Part 2: Test methods to assess the horizontal transverse distribution for hydraulic sprayers

*Matériel de protection des cultures — Équipement de pulvérisation —
Partie 2: Méthodes d'essai pour évaluer la distribution transversale
horizontale des pulvérisateurs à jet projeté*

Reference number

Contents

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Measuring equipment	1
5 Test conditions	2
5.1 General.....	2
5.2 Temperature and relative humidity.....	2
5.3 Choice of nozzles for the tests.....	2
5.4 Control pressure.....	2
6 Test methods	2
6.1 General.....	2
6.2 Standard conditions.....	3
6.3 Transverse distribution evaluation by means of sprayed liquid volume measurement – sprayed liquid volume measurement method.....	3
6.3.1 Setup.....	3
6.3.2 Measurement.....	3
6.3.3 Results.....	4
6.4 Nozzle tip position.....	4
6.4.1 Spacing.....	4
6.4.2 Alignment.....	4
6.5 Transverse distribution evaluation by means of nozzle flow rate measurement – nozzle flow rate measurement test method.....	4
6.5.1 Setup.....	4
6.5.2 Measurements.....	5
6.5.3 Results.....	5
6.6 Transverse distribution evaluation by means of nozzle tip pressure measurement – nozzle tip pressure measurement test method.....	5
6.6.1 Setup.....	5
6.6.2 Measurements.....	6
6.6.3 Results.....	6
Annex A (informative) Transverse distribution test report	7
Annex B (informative) Applicable test methods	9
Annex C (informative) Guidance to estimate horizontal transverse distribution	10

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 6, *Equipment for crop protection*.

This third edition cancels and replaces the second edition (ISO 5682-2:1997), which has been technically revised as follows:

- addition of a spray flow transverse volume distribution test method;
- addition of a spray pressure transverse distribution test method;
- clarification for nozzle positioning;
- addition of an annex;
- agitation method removed;
- suppression of fill from the tank filling device;
- suppression of capacity of the tank;
- suppression of head losses in the delivery piping;
- suppression of discharge from the pump.

A list of all the parts in the ISO 5682 series can be found on the ISO website.
