Second edition
2022-09

Bonded abrasive products — Dimensions —

Part 14: Grinding wheels for deburring and fettling/snagging on an angle grinder

Produits abrasifs agglomérés — Dimensions —

*Partie 14: Meules pour ébarbage et ébavurage sur meuleuses
portatives à renvoi d'angle*

1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Shape types and dimensions	1
4.1 Shape type 6: straight cup grinding wheel.....	1
4.2 Shape type 11: taper cup grinding wheel.....	3
4.3 Shape type 27: depressed centre wheel for grinding or grinding/cutting-off.....	5
4.4 Shape type 28: depressed centre grinding wheel, concave shape.....	7
4.5 Shape type 29: depressed centre grinding wheel, convex shape.....	7
5 Designation	8
Bibliography	9

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 29, *Small tools*, Subcommittee SC 5, *Grinding wheels and abrasives*.

This second edition cancels and replaces the first edition (ISO 603-14:1999), which has been technically revised.

The main changes are as follows:

- the scope has been specified;
- [Clause 2](#) "Normative references" has been revised;
- [Clause 3](#) "Terms and definitions" has been added;
- in [Clause 4](#) (former [Clause 3](#)), introductory, explanatory sentences have been added for better understanding;
- the figures with shape types and dimensions have been adapted to ISO 525:2020 (e.g. in shape types 27 and 28, the dimension "F" for the elevation of depressed centre has been renamed "M");
- shape type 29 "Depressed centre grinding wheel, convex shape" has been added;
- the values in the tables have been adapted to the state of the art and the most common dimensions for imperial sizes have also been included for more global acceptance;
- [Clause 5](#) (former [Clause 4](#)) "Designation" has been revised with reference to ISO 525;
- former [Clause 5](#) "Specifications" has been removed and the reference to ISO 13942 (limit deviations and run out tolerances) has been given in the scope for information;
- the Bibliography has been revised.

A list of all parts in the ISO 603 series can be found on the ISO website.

Introduction

Dimensions and tolerances are expressed in millimetres, with dimensions in inches (in) shown between brackets.
