Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	1
5 Apparatus	2
5.1 Grounded metal base plate	2
5.2 Rubber mat	2
5.3 Polyethylene foam (PE-foam)	2
5.4 Polyethylene foil (PE-foil)	2
5.5 Test sandals	2
5.6 Means of cleaning the sandals	2
5.7 Ionizing source	3
5.8 Body voltage measuring system	3
5.9 Measuring devices for temperature and relative humidity	3
6 Sampling and selection of specimens	3
6.1 Textile floor coverings	3
6.2 Laminate	3
7 Preconditioning of specimens, PE-foam, PE-foil and rubber mats	3
8 Atmosphere for conditioning and testing	4
9 Test procedures	4
9.1 Preparation	4
9.2 Method A: test procedure in laboratory conditions	4
9.3 Method B: test procedure <i>in situ</i>	6
10 Calculation and expression of results	6
11 Test report	6
Annex A (normative) Specification of the sandals	7
Annex B (normative) Standard sole material — Neolite (standard XS-664P)	11
Annex C (normative) Standard sole material — BAM-rubber	12
Annex D (normative) Method for measuring the electrical resistance of the footwear	13
Annex E (normative) Example of a hand-held electrode and its use	15
Annex F (informative) Method of checking calibration of the measuring system	17
Bibliography	18

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 6356 was prepared by Technical Committee ISO/TC 219, *Floor coverings*.

This second edition cancels and replaces the first edition (ISO 6356:2000), which has been technically revised.

Introduction

This test is a measurement of the electric potential (voltage) due to the accumulation of static charge on a person walking on the surface of a textile and laminate floor covering under controlled conditions. It is important that this measurement is made under carefully controlled conditions to minimize test variability.
