Third edition
2022-07

Wrought aluminium and aluminium alloys — Extruded rods/bars, tubes and profiles —

Part 1: Technical conditions for inspection and delivery

Aluminium et alliages d'aluminium corroyés — Barres, tubes et profilés filés —

Partie 1: Conditions techniques de contrôle et de livraison

Contents

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Orders or tenders	4
5 Requirements	4
5.1 Production and manufacturing processes.....	4
5.2 Quality control.....	4
5.3 Chemical composition.....	4
5.4 Mechanical properties.....	5
5.5 Surface finish.....	5
5.6 Dimensional tolerances.....	5
5.7 Stress corrosion cracking resistance.....	5
6 Test procedure	5
6.1 Production of specimens.....	5
6.1.1 Specimens for chemical analysis.....	5
6.1.2 Specimens for mechanical testing.....	5
6.1.3 Test pieces for tensile test.....	6
6.1.4 Test pieces for bend test.....	7
6.2 Test methods.....	7
6.2.1 Chemical composition.....	7
6.2.2 Tensile test.....	7
6.2.3 Measurement of dimensions.....	7
6.2.4 Surface finish.....	7
6.2.5 Bend test.....	7
6.2.6 Resistance to stress corrosion cracking.....	8
6.2.7 Additional tests.....	8
6.3 Retests.....	8
6.3.1 Mechanical properties.....	8
6.3.2 Other properties.....	8
7 Inspection documents	8
8 Marking	9
9 Packing	9
10 Arbitration	9
Annex A (normative) Location of test pieces	10
Annex B (normative) Resistance to stress-corrosion cracking for alloy 7075 in tempers T73, T73510 and T73511 — Electrical conductivity	14

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 79, *Light metals and their alloys*, Subcommittee SC 6, *Wrought aluminium and aluminium alloys*.

This third edition cancels and replaces the second edition (ISO 6362-1:2012), which has been technically revised. The main changes are as follows:

- JIS H1305 has been added as an option for the chemical composition analysis method;
- errors have been corrected and expressions modified throughout.

A list of all parts in the ISO 6362 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
