

Fourth edition
2022-07

Wrought aluminium and aluminium alloys — Extruded rods/bars, tubes and profiles —

Part 3: Tolerances on form and dimensions for extruded rectangular bars

Aluminium et alliages d'aluminium corroyés — Barres, tubes et profilés filés —

Partie 3: Tolérances sur forme et dimensions pour barres rectangulaires filées

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Materials	1
5 Tolerances on form and dimensions	2
5.1 Dimensional tolerances.....	2
5.1.1 Tolerances on width and thickness.....	2
5.1.2 Corner radii.....	3
5.1.3 Fixed-length tolerances.....	3
5.1.4 Squareness of cut ends.....	4
5.2 Form tolerances.....	4
5.2.1 General.....	4
5.2.2 Flatness tolerances.....	4
5.2.3 Straightness tolerances.....	5
5.2.4 Twist tolerances.....	5
5.2.5 Squareness tolerances.....	6
Bibliography	8

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 79, *Light metals and their alloys*, Subcommittee SC 6, *Wrought aluminium and aluminium alloys*.

This fourth edition cancels and replaces the third edition (ISO 6362-3:2012), which has been technically revised. The main changes are as follows:

- in [Clause 4](#), Table 1 has been separated into [Table 1](#) and [Table 2](#) by alloy group;
- in [Clause 4](#), alloys 3203 and 6026 have been added to [Table 1](#) and alloy 2033 has been added to [Table 2](#);
- errors have been corrected and expressions modified throughout.

A list of all parts in the ISO 6362 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
