Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
3.1 General terms.....	1
3.2 Terms related to air permeability perforation methods.....	3
3.3 Terms related to pasting.....	3
3.4 Terms related to the sack bottom.....	4
3.5 Terms related to bottom types.....	6
3.6 Terms related to valve types in sewn sacks.....	7
3.7 Terms related to valve types in pasted hexagonal bottom sacks.....	8
3.8 Terms related to descriptions of the sack and other construction details.....	11
3.9 Terms related to types of sacks.....	12
3.10 Terms related to types of sack paper.....	17
3.11 Other terms related to sack manufacture.....	19
Bibliography	20
Index	21

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 122, *Packaging*, Subcommittee SC 3, *Performance requirements and tests for means of packaging, packages and unit loads (as required by ISO/TC 122)*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 261, *Packaging*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This second edition cancels and replaces the first edition (ISO 6590-1:1983), which has been technically revised.

The main changes are as follows:

- general editorial changes have been made to the document in line with ISO/IEC Directives Part 2;
- updates have been made to the figures accompanying specific terms and definitions;
- considerations have been made to align with existing standards in order to avoid additional interpretations of identical terms, where necessary, and conversely proposing updates to existing definitions where considerations should be made in renewing the definitions in other standards;
- new terms have been added to reflect the development within the field;
- old terms for products and services no longer in use have been deleted.

A list of all parts in the ISO 6590 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
