Second edition
2019-04

Plastics — Determination of dynamic mechanical properties —

Part 5: Flexural vibration — Non-resonance method

Plastiques — Détermination des propriétés mécaniques dynamiques —

Partie 5: Vibration en flexion — Méthode hors résonance

Reference number

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	1
5 Apparatus	2
5.1 Loading assembly.....	2
5.1.1 General.....	2
5.1.2 Load stage.....	2
5.1.3 Transducers.....	2
5.2 Electronic data-processing equipment.....	3
5.3 Temperature measurement and control.....	3
5.4 Devices for measuring test specimen dimensions.....	3
6 Test specimens	3
6.1 General.....	3
6.2 Shape and dimensions.....	3
6.3 Preparation.....	3
7 Number of specimens	3
8 Conditioning	3
9 Procedure	4
9.1 Test atmosphere.....	4
9.2 Measuring the cross-section of the specimen.....	4
9.3 Clamping the specimen.....	4
9.4 Varying the temperature.....	4
9.5 Performing the test.....	4
10 Expression of results	5
10.1 Symbols.....	5
10.2 Calculation of flexural storage modulus E_f'	5
10.2.1 General.....	5
10.2.2 Avoidance of specimen resonance.....	6
10.2.3 Correction for transducer resonance.....	7
10.2.4 Correction for apparatus compliance.....	7
10.2.5 Application of a length correction.....	7
10.3 Calculation of the flexural loss factor $\tan \delta_{E_f}$	8
10.4 Calculation of the flexural loss modulus E_f''	8
10.5 Presentation of data as a function of temperature.....	8
11 Precision	8
12 Test report	8
Bibliography	11

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 5, *Physical-chemical properties*.

This second edition cancels and replaces the first edition (ISO 6721-5:1996), which has been technically revised. It also incorporates the Amendment ISO 6721-5:1996/Amd.1:2007. The main changes compared to the previous edition are as follows:

- the document has been revised editorially;
- normative references have been changed to undated.

A list of all parts in the ISO 6721 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
