Fourth edition
2019-10

Steel for the reinforcement of concrete —

Part 2: Ribbed bars

Aciers pour l'armature du béton —

Partie 2: Barres à verrous

Reference number
ISO 6935-2:2019(E)

Contents

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols	3
5 Dimensions, mass per unit length and permissible deviations	4
6 Requirements for ribs	5
7 Chemical composition	8
8 Mechanical properties	10
8.1 Tensile properties.....	10
8.2 Bending properties.....	12
8.3 Rebending properties after ageing.....	12
8.4 Fatigue properties.....	12
9 Testing	13
9.1 Tensile test.....	13
9.2 Conditions of testing.....	13
9.3 Bend test.....	13
9.4 Rebend test.....	13
9.5 Fatigue test.....	14
9.6 Chemical composition.....	14
10 Designation	14
11 Marking	14
11.1 Marking on bars.....	14
11.2 Identification of bundles.....	15
12 Evaluation of conformity	15
12.1 General.....	15
12.2 Evaluation of conformity during production.....	15
12.3 Acceptance testing of a specific delivery.....	16
12.3.1 General.....	16
12.3.2 Evaluation of characteristic values.....	16
12.3.3 Evaluation of specified minimum/maximum values.....	18
12.3.4 Test report.....	18
Annex A (informative) Five examples of marking systems for ribbed bars	19
Annex B (informative) Options for agreement between the manufacturer and purchaser	24
Bibliography	25

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 17, *Steel*, Subcommittee SC 16, *Steels for the reinforcement and prestressing of concrete*.

This fourth edition cancels and replaces the third edition (ISO 6935-2:2015), which has been technically revised. The main changes compared to the previous edition are as follows:

- [Figures 1, 2, 3](#) have been revised;
- [Figure 5, A.3, A.4](#) have been newly added;
- introduction of hot-rolled threaded reinforcing bar in [Clause 3, 4, 6](#) and A.7.

A list of all parts in the ISO 6935 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
