## **Portable hand-held forestry machines — Cutting attachments for brush cutters — Single-piece metal blades**

*Machines forestières portatives — Accessoires de coupe  
des débroussailleuses — Lames métalliques monobloc*

Reference number  
ISO 7113:1999(E)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 7113 was prepared by Technical Committee ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 17, *Manually portable forest machinery*.

This third edition cancels and replaces the second edition (ISO 7113:1991), of which it constitutes a technical revision. It extends the field of application to all single-piece metal blades for brush cutters, including circular saw blades. The requirement for the blade retention torque has been deleted; it will be dealt with instead in the machine safety standard for brush cutters and grass trimmers.
