## Contents

	Page
Foreword.....	iv
1 Scope .....	1
2 Normative references .....	1
3 Inspections and tests .....	2
3.1 Hardness test .....	2
3.2 Bearing surface squareness test .....	2
3.3 Axial load test.....	4
3.4 Wrenching feature test.....	6
3.5 Stress embrittlement test.....	7
3.6 Torque-out test .....	8
3.7 Test of no rotation of the captive washer .....	9
3.8 Push-out test .....	10
3.9 Self-locking torque at ambient temperature .....	12
3.10 Self-locking torque at ambient temperature after heat soak at maximum operating temperature .....	14
3.11 Permanent set test.....	15
3.12 Vibration test .....	16

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 7481 was prepared by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, Subcommittee SC 4, *Aerospace fastener systems*.

This second edition cancels and replaces the first edition (ISO 7481:1984), which has been technically revised. Notably, a test for no rotation of the captive washer was added.
