Third edition
2019-02

**Cereals — Determination of bulk
density, called mass per hectolitre —
Part 2:
Method of traceability for measuring
instruments through reference to the
international standard instrument**

*Céréales — Détermination de la masse volumique, dite masse à
l'hectolitre —*

*Partie 2: Méthode de raccordement des instruments de mesure à
l'étalon international*

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Requirements	2
4.1 Certified international or national standard instrument.....	2
4.2 National standard instrument.....	2
4.3 Secondary or internal standard instrument.....	2
4.4 Routine measuring instrument.....	3
5 Principle	3
6 Apparatus	3
7 Procedure	4
7.1 Traceability of national standard instruments through reference to the certified international or national standard instrument.....	4
7.1.1 General description.....	4
7.1.2 Preparation of the test samples.....	5
7.1.3 Use of the referenced test samples.....	5
7.1.4 Interpretation of the results.....	5
7.1.5 Adjustment of the national standard instrument.....	6
7.2 Traceability of the secondary standard instruments through reference to the national standard instrument.....	6
7.2.1 General description.....	6
7.2.2 Preparation of the test samples.....	6
7.2.3 Use of the referenced test samples.....	7
7.2.4 Interpretation of the results.....	7
7.2.5 Adjustment of the secondary standard instrument.....	7
7.3 Verification of instruments in operation.....	7
7.3.1 General description.....	7
7.3.2 Preparation of the control test samples.....	8
7.3.3 Use of the referenced test samples.....	8
7.3.4 Interpretation of the results.....	8
7.3.5 Adjustment of the instrument.....	9
8 Monitoring of instrument performance	9
9 Test reports	10
9.1 Analysis certificate.....	10
9.2 Conformity certificate.....	10
10 Identification of traced measuring instruments	10
Annex A (normative) Method for calculation of performance parameters of standard instruments and of measurement instruments	11
Annex B (informative) Example — Owners of certified standard measurement instruments	22
Bibliography	23

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 34, *Food products*, Subcommittee SC 4, *Cereals and pulses*.

This third edition cancels and replaces the second edition (ISO 7971-2:2009), which has been technically revised. The main changes compared with the previous edition are as follows:

- changes have been made to the test samples used for the traceability of measuring instruments through reference to standard measurement instruments (review of the number, range, distribution and characteristics of the samples);
- further details have been given on statistical tests;
- clarification has been given on the decision rules by adding a decision tree for national standard instruments and secondary or internal standard instruments and by introducing a bias control.

A list of all parts in the ISO 7971 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
