Carbonaceous materials used in the production of aluminium — Sampling plans and sampling from individual units —

Part 2: Prebaked anodes

*Produits carbonés utilisés pour la production de l'aluminium — Plans
d'échantillonnage et échantillonnage pour unités individuelles —*

Partie 2: Anodes précuites

Reference number
ISO 8007-2:1999(E)

Contents

1 Scope	1
2 Normative references	1
3 Definitions	1
4 Sampling plans for large consignments or for batches	1
4.1 General.....	1
4.2 Single unit of product.....	2
4.3 Drawing up a sampling plan based on acceptable quality level (AQL).....	2
4.4 Operating the sampling plan based on acceptable quality level (AQL).....	2
4.5 Drawing up a sampling plan based on average test values	6
5 Taking test samples from individual anodes	6
5.1 Procedure	6
5.2 Dimensions of test samples	6
5.3 Sampling points	6
6 Sampling report	9
Annex A (informative) Examples.....	11

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 8007-2 was prepared by Technical Committee, ISO/TC 47, *Chemistry*, Subcommittee SC 7, *Aluminium oxide, cryolite, aluminium fluoride, sodium fluoride, carbonaceous products for the aluminium industry*.

ISO 8007 consists of the following parts, under the general title, *Carbonaceous materials used in the production of aluminium — Sampling plans and sampling from individual units*:

- *Part 1: Cathode blocks*
- *Part 2: Prebaked anodes*

Part 3, which is in preparation, will give procedures for sampling sidewall blocks.

Annex A of this part of ISO 8007 is for information only.
