Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 8486-1 was prepared by Technical Committee ISO/TC 29, *Small tools*, Subcommittee SC 5, *Grinding wheels and abrasives*.

This first edition of ISO 8486-1 cancels and replaces ISO 8486:1986, which has been technically revised.

ISO 8486 consists of the following parts, under the general title *Bonded abrasives* — *Determination and designation of grain size distribution*:

- Part 1: Macrogrits F4 to F220
- Part 2: Microgrits F230 to F1200

Annex A of this part of ISO 8486 is for information only.
