Foreword	v
1 Scope	1
2 Normative references	1
3 Terms, definitions and abbreviations	2
3.1 Terms and definitions.....	2
3.2 Abbreviated terms.....	7
4 Other regulations and additional requirements	8
5 General test requirements	8
5.1 General.....	8
5.2 Measurement equipment accuracy.....	9
6 Functional test	10
6.1 General.....	10
6.1.1 General.....	10
6.1.2 Physical functional test.....	10
6.1.3 Functional test by simulation.....	10
6.2 General inspection.....	10
6.3 Measurements.....	11
6.4 Functional test report.....	11
7 Type test	12
7.1 General.....	12
7.2 Testing conditions.....	12
7.3 Characterisation of performance class.....	13
7.3.1 Steady state verification at constant power.....	13
7.3.2 Verification of power-sharing capability.....	14
7.3.3 Step load test.....	15
7.3.4 Start and stop time characteristics.....	16
7.4 Reactive power capability.....	18
7.4.1 General.....	18
7.4.2 Verification of reactive power capability.....	18
7.4.3 Test method for verification of reactive power capability control methods.....	20
7.5 Verification of grid synchronization limits.....	24
7.5.1 General.....	24
7.5.2 Testing method for verification of grid synchronisation limits.....	24
7.6 Test method for verification of FRT capability.....	25
7.6.1 General.....	25
7.6.2 Aim of the test.....	25
7.6.3 Documents to be provided before test.....	25
7.6.4 Test method.....	26
7.6.5 Acceptance criteria.....	27
7.7 Test method for verification of active power response to frequency variation.....	27
7.7.1 General.....	27
7.7.2 Aim of the test.....	27
7.7.3 Documents to be provided before test.....	28
7.7.4 Test method.....	28
7.7.5 Acceptance criteria.....	29
7.8 Test method for verification of generating set protections.....	29
7.8.1 General.....	29
7.8.2 Verification of generating set disconnection time from the grid.....	29
7.8.3 Verification of protection limits.....	30
8 Simulation-method-based assessment	31
8.1 General.....	31
8.2 Specification of model blocks.....	32

8.2.1	General.....	32
8.2.2	Engine and engine controller or governor block.....	32
8.2.3	AC generator block.....	33
8.2.4	Generating set controller block.....	33
8.2.5	Excitation controller (AVR) block.....	33
8.2.6	Exciter block.....	33
8.2.7	Protective devices block.....	33
8.2.8	Measurement transformer (if applicable).....	34
8.3	Simulation for ISO performance class in standalone island operation.....	34
8.3.1	General.....	34
8.3.2	Model validation for standalone island mode.....	34
8.4	Simulation for generating sets used in grid connected applications.....	36
8.4.1	General.....	36
8.4.2	Requirements and methodologies for model validation.....	36
8.4.3	Model validation for different grid requirements.....	37
8.5	Assessment for generating set family.....	41
8.5.1	Methodology.....	41
8.5.2	Assessment for ISO performance class for family.....	41
8.5.3	Assessment for type test for family in grid parallel application.....	41
9	Acceptance test.....	42
9.1	General.....	42
9.2	Responsibility.....	42
9.3	Preparation.....	42
9.3.1	Provision of auxiliary personnel, test equipment and operating materials.....	42
9.3.2	Acceptance test preparation at the installation site.....	43
9.3.3	Acceptance test preparation at the manufacturer's site or facility.....	43
9.3.4	Preliminary safety checks on generating set prior to testing.....	43
9.4	Further details.....	43
9.5	Extent of acceptance test.....	44
9.5.1	General.....	44
9.5.2	Checks (C).....	44
9.5.3	Measurements (M).....	45
9.6	Accuracy of measurement equipment and acceptance test procedure.....	46
9.6.1	Measurement equipment accuracy.....	46
9.6.2	Warm-up time.....	46
9.6.3	Generating set load test duration.....	47
9.6.4	Performing acceptance tests at the manufacturer's works.....	47
9.6.5	Installation site acceptance test.....	47
9.7	Acceptance test report.....	48
9.7.1	General.....	48
9.7.2	General data.....	48
9.7.3	Additional measured data for acceptance test.....	50
Annex A (informative) Test method using OVRT/UVRT test equipment.....		51
Annex B (informative) Test method for frequency ride through requirements.....		58
Annex C (informative) Example load step test report.....		63
Bibliography.....		65

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 70, *Internal combustion engines*.

This third edition cancels and replaces the second edition (ISO 8528-6:2005), which has been technically revised.

The main changes are as follows:

- structure of testing completely modified (table updated);
- [Clause 7](#) now includes a test procedure related to generating sets connected to the grid;
- [Clause 8](#) introduced for accessing the performance of generating sets in isochronous mode and grid parallel mode.

A list of all parts in the ISO 8528 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
