

ISO 8655-10

Piston-operated volumetric apparatus —

**Part 10:
User guidance, and requirements
for competence, training, and POVA
suitability**

Appareils volumétriques à piston —

*Partie 10: Recommandations d'utilisation et exigences relatives
aux compétences et à la formation des utilisateurs, ainsi qu'à
l'adéquation des AVAP*

**First edition
2024-02**

Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Requirements and best practices	1
4.1 Selection of POVA.....	1
4.2 Selection of exchangeable parts.....	2
4.3 Best practices.....	2
4.3.1 General.....	2
4.3.2 Setting of the volume (variable volume POVA).....	2
4.3.3 Air-displacement pipettes.....	3
4.3.4 Using air-displacement pipettes for liquids with properties differing from water.....	5
4.3.5 Positive displacement pipettes.....	6
4.3.6 Burettes.....	7
4.3.7 Dilutors.....	8
4.3.8 Dispensers.....	8
4.3.9 Syringes.....	9
5 User qualification and re-qualification	10
5.1 General.....	10
5.2 User training.....	10
5.3 User competence.....	10
5.4 User qualification.....	11
5.5 Documentation of user qualification.....	11
6 POVA qualification and re-qualification	11
6.1 General.....	11
6.2 Metrological performance requirements.....	12
6.2.1 POVA maximum permissible errors.....	12
6.2.2 Liquid handling process tolerances.....	12
6.2.3 Establishing performance requirements.....	12
6.3 Frequency.....	12
6.4 Replicate measurements.....	13
6.4.1 General.....	13
6.4.2 Impact of the number of replicate measurements on uncertainty.....	13
6.5 Pass/fail decision rules.....	13
6.5.1 General.....	13
6.5.2 No comparison to tolerances.....	14
6.5.3 Pass/fail determination of calibration.....	14
6.5.4 Pass/fail status of routine tests.....	14
6.5.5 Pass/fail assessment.....	14
6.6 Safe liquid handling range.....	14
6.7 Maintenance.....	15
7 Uncertainty in use of a single delivered volume	16
Annex A (informative) Selection of pipettes and exchangeable parts	17
Bibliography	23

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 48, *Laboratory equipment*.

A list of all parts in the ISO 8655 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

This document addresses the needs of piston-operated volumetric apparatus (POVA) users and quality and laboratory managers, and serves as a basis for:

- user guidance, training, and qualification;
- establishing POVA performance and test requirements to ensure fitness for their intended use;
- selecting pipetting equipment.

The tests specified in the ISO 8655 series are intended to be carried out by trained personnel.
