

ISO 8820-3

Road vehicles — Fuse-links —

Part 3:

Fuse-links with tabs (blade type) Type C (medium), Type E (high current) and Type F (miniature)

Véhicules routiers — Liaisons fusibles —

*Partie 3: Liaisons fusibles cavalier (Type à lame), Type C (moyen),
Type E (courant élevé) et Type F (miniature)*

**Fifth edition
2026-07**

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Marking, labelling and colour coding	1
5 Tests and requirements	2
5.1 General	2
5.1.1 Test criteria	2
5.1.2 Test sequence	6
5.2 Voltage drop	6
5.2.1 Tests	6
5.2.2 Requirement	7
5.3 Transient current cycling	8
5.3.1 Test	8
5.3.2 Requirement	9
5.4 Environmental conditions	9
5.5 Operating time-rating	9
5.5.1 Test	9
5.5.2 Requirement	9
5.6 Current steps	9
5.6.1 Test	9
5.6.2 Requirement	9
5.7 Breaking capacity	9
5.7.1 Test	9
5.7.2 Requirement	11
5.8 Strength of terminals	11
5.8.1 Test	11
5.8.2 Requirements	12
5.9 Test cable sizes	12
5.10 Temperature rise	13
6 Dimensions	14
6.1 Fuse-links Types C, E and F	14
6.2 Designation example	17
Annex A (informative) Temperature rise test	18
Bibliography	19

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement. For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 32, *Electrical and electronic components and general system aspects*.

This fifth edition cancels and replaces the fourth edition (ISO 8820-3:2015), which has been technically revised.

The main changes are as follows:

- updated test fixture definitions and drawings (see [5.1.1](#));
- updated temperature limit on Temperature Rise Test (see [Clause A.2](#));
- changed dimension b_2 on type "C" fuse drawing from 3,0 min to 2,5 min (see [6.1](#)).

A list of all parts in the ISO 8820 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
