

ISO 8980-4

Ophthalmic optics — Uncut finished spectacle lenses —

Part 4: Specifications and test methods for the properties of anti-reflective coatings and hydrophobic coatings

Optique ophtalmique — Verres de lunettes finis non détournés —

*Partie 4: Spécifications et méthodes d'essai relatives aux
propriétés des traitements antireflet et hydrophobes*

Third edition

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Requirements	2
4.1 General requirements	2
4.2 Usable diameter of coated area	3
4.3 Luminous and mean reflectances	3
4.4 Water repellency	3
4.5 Durability	3
5 Testing	3
5.1 General	3
5.2 Anti-reflective coating	3
5.2.1 Method of determination of spectral reflectance	3
5.2.2 Determination of spectral reflectance values	4
5.2.3 Determination of luminous reflectance	4
5.2.4 Determination of mean reflectance	4
5.2.5 Information to be made available on request	4
5.3 Hydrophobic coating	5
5.3.1 Contact angle measurement apparatus	5
5.3.2 Water for testing	5
5.3.3 Sample	5
5.3.4 Procedure	5
5.4 Determination of durability	6
5.4.1 Equipment and consumables	6
5.4.2 Test specimens	6
5.4.3 Test method: environmental cycling combined with rubbing sequences	6
5.4.4 Evaluation	7
6 Reference to this document	7
Annex A (informative) Significance of ρ_v and ρ_M in the description of anti-reflective coated lenses	8
Annex B (normative) Environmental sequence	9
Annex C (normative) Rubbing sequence procedure	11
Annex D (normative) Evaluation of surface quality	13
Annex E (informative) Examples of lenses passing and failing the visual evaluation	15
Annex F (informative) Examples of environmental sequence	16
Annex G (informative) Examples of a rubbing tool and components	18
Annex H (informative) Example of a contact angle test apparatus	20
Bibliography	22

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 172, *Optics and photonics*, Subcommittee SC 7, *Ophthalmic optics and instruments*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 170, *Ophthalmic optics*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This third edition cancels and replaces the second edition (ISO 8980-4:2006), which has been technically revised.

The main changes are as follows:

- the title has been updated;
- the scope has been expanded to include properties of hydrophobic coatings;
- the scope has been defined to exclude requirements and test methods found in other standards within the ISO 8980 series;
- normative references, terms and definitions relating to hydrophobic properties have been added in [Clause 2](#) and [3](#);
- test methods for properties of hydrophobic coatings have been added in [Clause 5](#) and informative and normative [Annexes C](#), [D](#) and [E](#).

A list of all parts in the ISO 8980 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
