<b>Foreword</b> .....	<b>v</b>
<b>1 Scope</b> .....	<b>1</b>
<b>2 Normative references</b> .....	<b>1</b>
<b>3 Terms and definitions</b> .....	<b>1</b>
<b>4 Symbols and abbreviated terms</b> .....	<b>1</b>
4.1 Symbols.....	1
4.2 Abbreviations.....	2
<b>5 General considerations</b> .....	<b>3</b>
5.1 Importance of backwater.....	3
5.2 Backwater conditions.....	3
5.3 Gauging requirements.....	3
5.4 Types of stage-fall-discharge relationships.....	4
<b>6 Unit-fall method</b> .....	<b>4</b>
6.1 General.....	4
6.2 Method of analysis.....	5
6.3 Computation of discharge.....	5
6.4 Example of unit-fall method.....	5
<b>7 Constant-fall method</b> .....	<b>7</b>
7.1 General.....	7
7.2 Method of analysis.....	7
7.3 Computation of discharge.....	7
7.4 Example of constant-fall method.....	7
<b>8 Variable-fall method</b> .....	<b>10</b>
8.1 General.....	10
8.2 Normal-fall method.....	11
8.3 Limiting-fall method.....	11
8.3.1 General.....	11
8.3.2 Method of analysis.....	11
8.3.3 Computation of discharge.....	11
8.3.4 Example of limiting-fall method.....	12
<b>9 Rating curves and tables</b> .....	<b>16</b>
<b>10 Method of computation</b> .....	<b>16</b>
<b>11 Periodic checking of stage-fall-discharge ratings</b> .....	<b>16</b>
<b>12 Extrapolations</b> .....	<b>16</b>
<b>13 Evaluation of uncertainty in the stage-fall-discharge relation</b> .....	<b>16</b>
13.1 General.....	16
13.2 Implementing the GUM procedure for evaluating uncertainty in the stage-fall-discharge relation and derived estimates.....	17
13.2.1 General.....	17
13.2.2 Propagation of uncertainty for stage-fall-discharge estimates.....	17
13.2.3 Uncertainty in rating curve.....	18
13.2.4 Uncertainty in the measured stage.....	21
13.2.5 Uncertainty in the measured fall.....	21
13.2.6 Prediction intervals of estimated discharge.....	21
13.2.7 Uncertainty caused by neglecting all other physical parameters.....	21
13.3 Example.....	22
13.3.1 General.....	22
13.3.2 Standard error of estimate.....	23
13.3.3 Uncertainty of mean response.....	23

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html)

This document was prepared by Technical Committee ISO/TC 113, *Hydrometry*, Subcommittee SC 1, *Velocity area methods*.

This second edition cancels and replaces the first edition (ISO 9123:2001), which has been technically revised. The main changes were to improve the text relating to the stage-fall-discharge method and to revise the previous clause on uncertainty in accordance with HUG/GUM and similar related standards on the estimation of uncertainty in flow measurements.
