

Second edition
2004-07-01

Thermoplastics valves for industrial applications — Pressure test methods and requirements —

Part 1: General

Robinets en matières thermoplastiques pour les applications industrielles — Méthodes d'essai de pression et exigences —

Partie 1: Généralités

Foreword.....	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Classification of pressure tests	2
5 Test specimens	2
5.1 Test specimens for materials tests	2
5.2 Test specimens for shell tests	3
5.3 Test specimens for long-term behaviour of a complete valve	3
5.4 Test specimens for seat and packing tests	3
5.5 Conditioning	3
6 Test apparatus	4
7 Procedure	4
7.1 Materials test	4
7.2 Shell test	4
7.3 Long-term behaviour test of complete valves	5
7.4 Seat and packing test	5
8 Interpretation of results	6
8.1 Materials tests	6
8.2 Shell tests	6
8.3 Long-term behaviour tests of complete valves	6
8.4 Seat and packing tests	7
9 Test report	7

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 9393-1 was prepared by Technical Committee ISO/TC 138, *Plastics pipes, fittings and valves for the transport of fluids*, Subcommittee SC 7, *Valves and auxiliary equipment of plastics materials*.

This second edition cancels and replaces the first edition (ISO 9393-1:1994), which has been technically revised.

ISO 9393 consists of the following parts, under the general title *Thermoplastics valves for industrial applications — Pressure test methods and requirements*:

- *Part 1: General*
- *Part 2: Test conditions and basic requirements*
