

Second edition
2009-06-15

Iron ores — Determination of manganese content —

Part 1: Flame atomic absorption spectrometric method

Minerais de fer — Dosage du manganèse —

Partie 1: Méthode par spectrométrie d'absorption atomique dans la flamme

Reference number
ISO 9682-1:2009(E)

Foreword	iv
1 Scope	1
2 Normative references	1
3 Principle.....	1
4 Reagents.....	2
5 Apparatus	2
6 Sampling and samples.....	3
6.1 Laboratory sample	3
6.2 Preparation of predried test samples	3
7 Procedure	4
7.1 Number of determinations.....	4
7.2 Safety precautions	4
7.3 Test portion.....	4
7.4 Blank test and check test	4
7.5 Determination	4
7.5.1 Decomposition of the test portion.....	4
7.5.2 Treatment of the test solution.....	5
7.5.3 Adjustment of the atomic absorption spectrometer.....	6
7.5.4 Atomic absorption measurements	6
8 Expression of results	7
8.1 Calculation of mass fraction of manganese	7
8.2 General treatment of results.....	7
8.2.1 Repeatability and permissible tolerance.....	7
8.2.2 Determination of analytical result.....	8
8.2.3 Between-laboratories precision	8
8.2.4 Check for trueness	8
8.2.5 Calculation of final result.....	9
8.3 Oxide factor.....	9
9 Test report.....	10
Annex A (normative) Flowsheet of the procedure for the acceptance of analytical values for test samples	11
Annex B (informative) Derivation of repeatability and permissible tolerance equations.....	12
Annex C (informative) Precision data obtained by international analytical trials	13

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 9682-1 was prepared by Technical Committee ISO/TC 102, *Iron ore and direct reduced iron*, Subcommittee SC 2, *Chemical analysis*.

This second edition cancels and replaces the first edition (ISO 9682-1:1991), which has been technically revised.

ISO 9682 consists of the following parts, under the general title *Iron ores — Determination of manganese content*:

- *Part 1: Flame atomic absorption spectrometric method*
- *Part 2: Periodate spectrophotometric method*
