ISO/IEC 10181-2:1996(E)

**CONTENTS**

	<i>Page</i>
1 Scope .....	1
2 Normative references .....	2
2.1 Identical Recommendations   International Standards .....	2
2.2 Paired Recommendations   International Standards equivalent in technical content .....	2
2.3 Additional references .....	2
3 Definitions .....	2
4 Abbreviations .....	4
5 General discussion of authentication .....	4
5.1 Basic concepts of authentication .....	4
5.2 Aspects of authentication service .....	6
5.3 Principles used in authentication .....	8
5.4 Phases of authentication .....	8
5.5 Trusted Third Party Involvement .....	9
5.6 Types of principal .....	12
5.7 Human user authentication .....	13
5.8 Types of attack on authentication .....	13
6 Authentication information and facilities .....	15
6.1 Authentication information .....	15
6.2 Facilities .....	18
7 Characteristics of authentication mechanisms .....	22
7.1 Symmetry/Asymmetry .....	22
7.2 Use of cryptographic/Non-cryptographic techniques .....	23
7.3 Types of authentication .....	23
8 Authentication mechanisms .....	23
8.1 Classification by vulnerabilities .....	23
8.2 Initiation of transfer .....	29
8.3 Use of authentication certificates .....	29
8.4 Mutual authentication .....	29
8.5 Summary of class characteristics .....	30
8.6 Classification by configuration .....	30
9 Interactions with other security services/mechanisms .....	33
9.1 Access control .....	33
9.2 Data integrity .....	33
9.3 Data confidentiality .....	34
9.4 Non-repudiation .....	34
9.5 Audit .....	34

## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

International Standard ISO/IEC 10181-2 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 21, *Open systems interconnection, data management and open distributed processing*, in collaboration with ITU-T. The identical text is published as ITU-T Recommendation X.811.

ISO/IEC consists of the following parts, under the general title *Information technology — Open Systems Interconnection — Security frameworks for open systems*:

- *Part 1: Overview*
- *Part 2: Authentication framework*
- *Part 3: Access control framework*
- *Part 4: Non-repudiation*
- *Part 5: Confidentiality*
- *Part 6: Integrity*
- *Part 7: Security audit framework*

Annexes A to G of this part of ISO/IEC 10181 are for information only.
