Foreword	xiii
Introduction.....	xv
1 Scope.....	1
1.1 Scope – Structure of a metadata registry	1
1.2 Scope – Basic attributes of metadata items	1
2 Normative references.....	1
3 Terms, definitions and abbreviated terms	1
3.1 Terms and definitions of metamodel constructs used in this part of ISO/IEC 11179	2
3.2 Terms for concepts used in this part of ISO/IEC 11179	4
3.3 Abbreviated terms	20
4 Conformance	21
4.1 Overview of conformance	21
4.2 Degree of conformance	21
4.2.1 General	21
4.2.2 Strictly conforming implementations.....	22
4.2.3 Conforming implementations	22
4.3 Conformance by clause.....	22
4.4 Registry conformance.....	23
4.4.1 Overview.....	23
4.4.2 Standard profiles for edition 3 registries	23
4.5 Obligation.....	23
4.6 Implementation conformance statement (ICS).....	23
4.7 Roles and responsibilities for registration	24
5 Structure of a metadata registry	24
5.1 Metamodel for a metadata registry.....	24
5.2 Application of the metamodel	24
5.3 Specification of the metamodel	25
5.3.1 Terminology used in specifying the metamodel.....	25
5.3.2 Choice of fonts	25
5.3.3 Use of UML Packages	25
5.3.4 Package dependencies.....	26
5.3.5 Use of UML Class diagrams and textual description	27
5.4 Types, instances and values.....	27
5.5 Types of items in an ISO/IEC 11179 metadata registry	28
5.5.1 Overview of types of items.....	28
5.5.2 Rules for types of items.....	29
5.6 Extensibility	31
5.7 Date references.....	31
6 Basic package.....	31
6.1 Overview of Basic package	31
6.2 Basic Types metamodel region	31
6.2.1 Overview of Basic Types	31
6.2.2 Boolean datatype.....	31
6.2.3 Date datatype	32
6.2.4 Datetime datatype.....	32
6.2.5 Integer datatype.....	32
6.2.6 Natural_Range datatype	32
6.2.7 Notation datatype	32
6.2.8 Phone_Number datatype	32

This is a preview of "ISO/IEC 11179-3:2013". [Click here to purchase the full version from the ANSI store.](#)

6.2.9	Postal_Address datatype	32
6.2.10	Sign datatype	33
6.2.11	String datatype.....	33
6.2.12	Text datatype.....	33
6.2.13	Value datatype.....	33
6.3	Basic Classes metamodel region.....	33
6.3.1	Overview of Basic Classes	33
6.3.2	Contact class.....	34
6.3.3	Document_Type class.....	35
6.3.4	Individual class	35
6.3.5	Language_Identification class	37
6.3.6	Organization class	39
6.3.7	Reference_Document class.....	40
6.3.8	Registration_Authority_Identifier class.....	42
6.3.9	Role class	43
7	Identification, Designation and Definition package	45
7.1	Overview of this package.....	45
7.2	Identification metamodel region	45
7.2.1	Overview	45
7.2.2	Classes in the Identification metamodel region	46
7.2.3	Associations in the Identification metamodel region	51
7.3	Designation and Definition metamodel region	52
7.3.1	Overview	52
7.3.2	Classes in the Designation and Definition metamodel region.....	53
7.3.3	Association Classes in the Designation and Definition metamodel region	59
7.3.4	Associations in the Designation and Definition metamodel region.....	60
8	Registration package	62
8.1	Registration metamodel region.....	62
8.1.1	Overview	62
8.1.2	Classes in the Registration region.....	62
8.1.3	Classes referenced from the Basic package	75
8.1.4	Classes referenced from the Identification, Designation and Definition package	75
8.1.5	Association Classes in the Registration region	76
8.1.6	Associations in the Registration region.....	76
9	Concepts package	78
9.1	Concepts metamodel region	78
9.1.1	Overview	78
9.1.2	Classes in the Concepts metamodel region	79
9.1.3	Associations of the Concepts metamodel region	84
9.2	Classification metamodel region	87
9.2.1	Overview	87
9.2.2	Classes in the Classification metamodel region	88
9.2.3	Associations Classes in the Classification metamodel region	89
9.2.4	Associations in the Classification metamodel region	89
10	Binary Relations package	90
10.1	Binary Relations metamodel region	90
10.1.1	Overview	90
10.1.2	Classes in the Binary_Relations metamodel region	90
11	Data Description package	93
11.1	High-level Data Description metamodel region.....	93
11.1.1	Overview	93
11.1.2	Classes of High-level Data Description metamodel.....	93
11.1.3	Associations of the High Level Data Description metamodel	96
11.1.4	Constraints of the High Level Metamodel	97
11.2	Data Element Concept metamodel region	97
11.2.1	Overview	97
11.2.2	Classes in the Data_Element_Concept region	98

This is a preview of "ISO/IEC 11179-3:2013". [Click here to purchase the full version from the ANSI store.](#)

11.2.3	Associations in the Data_Element_Concept region	99
11.3	Conceptual and Value_Domain metamodel region	100
11.3.1	Overview	100
11.3.2	Classes in the Conceptual and Value_Domain region	102
11.3.3	Associations in the Conceptual and Value_Domain region	110
11.3.4	Additional Constraints of the Conceptual and Value_Domain region	112
11.4	Measurement metamodel region	114
11.4.1	Overview	114
11.4.2	Classes in the Measurement region	114
11.4.3	Associations in the Measurement region	117
11.5	Data_Element metamodel region	118
11.5.1	Overview	118
11.5.2	Classes in the Data_Element Region	118
11.5.3	Associations in the Data_Element region	121
11.6	Consolidated Data Description Metamodel	123
11.7	Types of Concepts in the Data Description Metamodel	124
12	Basic attributes	124
12.1	Use of basic attributes	124
12.2	Common attributes	125
12.2.1	Identifying	125
12.2.2	Naming	125
12.2.3	Definitional	126
12.2.4	Administrative	126
12.2.5	Relational	126
12.3	Attributes specific to Data_Element_Concepts	127
12.4	Attributes specific to Data_Elements	127
12.5	Attributes specific to Conceptual_Domains	127
12.6	Attributes specific to Value_Domains	127
12.7	Attributes specific to Permissible_Values	128
12.8	Attributes specific to Value_Meanings	128
Annex A	(normative) Alphabetical list of terms and designations	129
Annex B	(normative) Consolidated Class Hierarchy	137
Annex C	(informative) Mapping the ISO/IEC 11179-3:1994 basic attributes to the ISO/IEC 11179-3:2011 metamodel and basic attributes	138
C.1	Introduction	138
C.1.1	Overview of Basic Attributes from ISO/IEC 11179-3:1994	138
C.1.2	Description of Table Structures in this Annex	139
C.2	Mapping the Basic Attributes	141
C.2.1	Common Identifying attributes	141
C.2.2	Common Naming attributes	143
C.2.3	Common Definitional attributes	147
C.2.4	Common Administrative attributes	148
C.2.5	Common Relational attributes	150
C.2.6	Attributes specific to Data_Element_Concepts	154
C.2.7	Attributes specific to Data_Elements	157
C.2.8	Attributes specific to Conceptual_Domains	164
C.2.9	Attributes specific to Value_Domains	165
C.2.10	Attributes specific to Permissible_Values	166
C.2.11	Attributes specific to Value_Meanings	167
Annex D	(informative) Mapping the ISO/IEC 11179-3:2003 metamodel to the ISO/IEC 11179-3:2011 metamodel	169
D.1	Introduction	169
D.2	Mapping the Edition 2 Administration and Identification Region	169
D.2.1	Administered_Item	169
D.2.2	Administration_Record	169
D.2.3	Contact	170
D.2.4	Item_Identifier	170

This is a preview of "ISO/IEC 11179-3:2013". [Click here to purchase the full version from the ANSI store.](#)

D.2.5	Language_Identification	170
D.2.6	Organization	171
D.2.7	Reference_Document	171
D.2.8	Registrar	171
D.2.9	Registration_Authority	171
D.2.10	Registration_Authority_Identifier	172
D.2.11	Stewardship	172
D.2.12	Submission	172
D.3	Mapping the Edition 2 Naming and Definition Region	173
D.3.1	Context (for Administered_Item)	173
D.3.2	Terminological_Entry	173
D.3.3	Language_Section	173
D.3.4	Definition (of Administered_Item)	174
D.3.5	Designation (of Administered_Item)	174
D.4	Mapping the Edition 2 Classification Region	174
D.4.1	Classification_Scheme	174
D.4.2	Classification_Scheme_Item	175
D.4.3	Classification_Scheme_Item_Relationship	175
D.5	Mapping the Edition 2 Data_Element_Concept Region	175
D.5.1	Object_Class	175
D.5.2	Property	175
D.5.3	Data_Element_Concept	176
D.5.4	Concept_Relationship	176
D.6	Mapping the Edition 2 Conceptual and Value Domain Region	176
D.6.1	Conceptual_Domain	176
D.6.2	Enumerated_Conceptual_Domain	177
D.6.3	Value_Meaning	177
D.6.4	Non-enumerated_Conceptual_Domain	177
D.6.5	Value_Domain	178
D.6.6	Enumerated_Value_Domain	178
D.6.7	Permissible_Value	178
D.6.8	Value	179
D.6.9	Non-enumerated_Value_Domain	179
D.6.10	Datatype	179
D.6.11	Unit_of_Measure	179
D.7	Mapping the Edition 2 Data_Element Region	180
D.7.1	Data_Element	180
D.7.2	Representation_Class	180
D.7.3	Data_Element_Example	181
D.7.4	Derivation_Rule	181
D.7.5	Data_Element_Derivation	181
Annex E (informative)	Concept System Examples	182
E.1	Concept System Metamodels	182
E.2	SKOS Example	183
E.2.1	SKOS Metamodel	183
E.2.2	SKOS Example Thesaurus	184
E.2.3	Example Value Domain References	185
E.3	ORM Example	187
E.3.1	ORM Metamodel	187
E.3.2	Car Registration Model	189
E.4	OWL Example	194
E.4.1	OWL Metamodel	194
E.4.2	Car Registration Ontology	202
E.5	CLIF Example	216
E.5.1	CL Metamodel	216
E.5.2	CLIF Units Example from ISO/IEC 19763-3	217
Annex F (informative)	Representation Class as a Concept System	221
F.1	Introduction	221
F.2	Description of Representation Class	221

This is a preview of "ISO/IEC 11179-3:2013". [Click here to purchase the full version from the ANSI store.](#)

F.3	Implementation of Representation Class as a Concept_System	222
Annex G (informative)	Comparison for Conformance Levels across Editions of this part of ISO/IEC 11179	223
G.1	Introduction.....	223
G.2	Conformance Levels for Edition 2 Level 2.....	223
G.3	Conformance Levels for Edition 2 Level 1 and Edition 1	223

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 11179-3 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 32, *Data management and interchange*.

This third edition cancels and replaces the second edition (ISO/IEC 11179-3:2003) and ISO/IEC 11179-3:2003/Cor 1:2004. The changes are as follows:

Edition 3 of this part of ISO/IEC 11179 includes several enhancements to Edition 2, both in terms of the presentation of the metamodel, and its capabilities, as follows:

From a presentation perspective, these include:

- use of UML 2.4.1 instead of UML 1.4 to describe the metamodel;
- use of UML packages to show dependencies between various regions of the metamodel. (See 5.3.3 and 5.3.4.)

From a capability perspective, these include:

- introduction of different types of metadata items (see 5.5);
- support for registration of Concept Systems (see 9.1);
- finer-grained conformance options (see 4.3).

ISO/IEC 11179 consists of the following parts, under the general title *Information technology — Metadata registries (MDR)*:

— *Part 1: Framework*

— *Part 2: Classification*

— *Part 3: Registry metamodel and basic attributes*

— *Part 4: Formulation of data definitions*

This is a preview of "ISO/IEC 11179-3:2013". [Click here to purchase the full version from the ANSI store.](#)

— *Part 5: Naming and identification principles*

— *Part 6: Registration*

This is a preview of "ISO/IEC 11179-3:2013". [Click here to purchase the full version from the ANSI store.](#)

Introduction

Data processing and electronic data interchange rely heavily on accurate, reliable, controllable and verifiable data recorded in databases. A prerequisite for correct and proper use and interpretation of data is that both users and owners of data have a common understanding of the meaning and representation of the data. To facilitate this common understanding, a number of characteristics, or attributes, of the data have to be defined. These characteristics of data are known as “metadata”, that is, “data that describes data”. This part of ISO/IEC 11179 provides for the attributes of data elements and associated metadata to be specified and registered as **metadata items** in a **metadata registry** (MDR).

The structure of a metadata registry is specified in the form of a conceptual data model. The metadata registry is used to keep information about data elements and associated concepts, such as “data element concepts”, “conceptual domains” and “value domains”. Generically, these are all referred to as “metadata items”. Such metadata are necessary to clearly describe, record, analyse, classify and administer data.

When considering data and metadata, it is important to distinguish between types of data/metadata, and instances of these types. Clause 5 through 11 of this part of ISO/IEC 11179 specify the types of metadata objects that form the structure of a metadata registry. A metadata registry will be populated with instances of these metadata objects (metadata items), which in turn define types of data, e.g. in an application database. In other words, instances of metadata specify types of application level data. In turn, the application database will be populated by the real world data as instances of those defined datatypes.

NOTE ISO/IEC 10027:1990, *Information technology — Information resource dictionary system (IRDS) Framework* and ISO/IEC TR 10032:2003, *Information technology — Reference model for data management* explain the concepts of different levels of modelling.

In this part of ISO/IEC 11179, clause 12 describes the basic attributes of metadata items for purposes where a complete metadata registry is not appropriate.

This part of ISO/IEC 11179 is of interest to information developers, information managers, data administrators, standards developers, application developers, business modellers and others who are responsible for making data understandable and shareable. ISO/IEC 11179 has broad applicability across subject area domains and information technologies.

This part of ISO/IEC 11179 applies to activities including:

- a) the definition, specification and contents of metadata registries, including interchanging or referencing among various collections of data elements;
- b) the design and specification of application-oriented data models, databases and message types for data interchange;
- c) the actual use of data in communications and information processing systems;
- d) interchange or reference among various collections of metadata;
- e) the registration and management of semantic artifacts that are useful for data management, data administration, and data analysis;
- f) the interrelation and mapping of concept systems with other concept systems, e.g., to support efforts to converge on consistency through harmonization and vetting activities;
- g) the interrelation of concept systems with data held in relational databases, XML databases, knowledgebases, text, and possibly graph databases deriving from natural language text understanding systems;

This is a preview of "ISO/IEC 11179-3:2013". [Click here to purchase the full version from the ANSI store.](#)

- h) the provision of services for semantic computing: Semantics Service Oriented Architecture, Semantic Grids, semantics based workflows, Semantic Web, etc.;
- i) support for addressing semantic web considerations such as AAA (anyone can say anything about anything), non-unique names, and open world assumption;
- j) the capture of semantics with more formal techniques (in addition to natural language) -- First Order Logic (e.g., Common Logic), Description Logics (such as OWL-DL);
- k) support of Application Development and Maintenance;
- l) support of data migration, data mediation;
- m) support of portals, data marts, and data warehouses;
- n) support of data grids and online transaction networks;
- o) ontological reasoning with metadata;
- p) ontology entry point for browsing and searching metadata registries;
- q) capture of associations between the published identifiers used in the ontology(s), and the concepts registered in the registry;
- r) support for Ontology-driven Data Translation;
- s) support for data integration & data interoperation.
