About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
0.1 General.....	7
0.2 About Internet of Things (IoT)	7
0.3 IoT sources of information.....	7
0.4 General principles of a reference architecture	8
1 Scope.....	9
2 Normative references	9
3 Terms and definitions	9
4 Abbreviated terms	9
5 IoT RA context.....	10
5.1 Overview.....	10
5.2 Stakeholders and concerns.....	11
6 IoT RA viewpoints and views	12
6.1 Overview.....	12
6.2 Foundational IoT viewpoint and views	13
6.2.1 Foundational IoT viewpoint.....	13
6.2.2 Foundational IoT view.....	13
6.3 Business viewpoint and view.....	19
6.3.1 Business viewpoint	19
6.3.2 Business view.....	19
6.4 Usage viewpoint and view.....	21
6.4.1 Usage viewpoint	21
6.4.2 Usage view.....	21
6.5 Functional viewpoint and view.....	22
6.5.1 Functional viewpoint.....	22
6.5.2 Functional view.....	23
6.6 Trustworthiness viewpoint and view	25
6.6.1 Trustworthiness viewpoint.....	25
6.6.2 Trustworthiness view	26
6.7 Construction viewpoint and views	29
6.7.1 Construction viewpoint.....	29
6.7.2 Construction view	31
6.7.3 IoT component pattern.....	32
Annex A (normative) Additional IoT construction patterns	38
A.1 General.....	38
A.2 Reference Architecture Model Industrie 4.0 (RAMI 4.0) pattern.....	38
A.3 Dynamic IoT system pattern.....	40
A.4 IoT enterprise system pattern.....	43
A.5 IoT enterprise networking pattern.....	45
A.6 IoT enterprise usage pattern	47
Annex B (informative) Guidance on the use of ISO/IEC/IEEE 42010:2022.....	53
B.1 Overview.....	53
B.2 Systems and architectures	53
B.3 Elements in ISO/IEC/IEEE 42010:2022 used in ISO/IEC 30141 IoT reference architecture description.....	53

B.3.1	Overview	53
B.3.2	Stakeholders, perspective, and concerns	54
B.4	Viewpoints, model kinds, legends, correspondences, and correspondence methods	55
B.5	Views and models	55
B.6	Correspondences	55
Annex C (informative)	Characteristics for IoT systems in particular contexts	56
C.1	Common characteristics	56
C.1.1	Legacy support	56
C.1.2	Network connectivity	56
C.1.3	Unique identification	56
C.1.4	Well-defined components	57
C.1.5	Auto-configuration	57
C.1.6	Content-awareness	57
C.1.7	Context-awareness	57
C.1.8	Discoverability	57
C.1.9	Manageability	58
C.1.10	Network management and operation	58
C.1.11	Real-time capability	58
C.1.12	Self-description	59
C.1.13	Service subscription	59
C.2	Characteristics related to trustworthiness	59
C.2.1	Data characteristics – volume, velocity, veracity, variability, and variety	59
C.2.2	Protection of personally identifiable information (PII)	60
C.2.3	Flexibility	60
Bibliography	61
Figure 1	– Using the IoT RA standard	8
Figure 2	– Relationship between IoT component, IoT system and IoT environment	14
Figure 3	– Example of IoT environment	16
Figure 4	– External facing functions	21
Figure 5	– Internal model of abstract function classes	23
Figure 6	– Legend used in the trustworthiness view	26
Figure 7	– IoT architecture construction view	31
Figure 8	– Capabilities of an IoT component	32
Figure A.1	– RAMI 4.0	39
Figure A.2	– DSC components	41
Figure A.3	– Message flow in DSC	42
Figure A.4	– Home smart air cleaning service	42
Figure A.5	– Example system deployment model	43
Figure A.6	– Networking model	45
Figure A.7	– Roles present when the system is in use	48
Figure A.8	– IoT service provider subroles and activities	48
Figure A.9	– IoT service developer subroles and activities	49
Figure A.10	– IoT subroles and activities	50
Figure A.11	– Activities of device and application development	50

Figure A.12 – Using device data for security-related analytics and operations.	51
Figure B.1 – Conceptual model of an architecture description	54
Table 1 – List of viewpoints, stakeholders, and concerns	11
Table 2 – Foundational IoT viewpoint.....	13
Table 3 – Business viewpoint.....	19
Table 4 – Usage viewpoint.....	21
Table 5 – Functional viewpoint.....	23
Table 6 – Trustworthiness viewpoint	26
Table 7 – Construction viewpoint	30
Table 8 – Construction pattern legend	30
Table 9 – IoT component pattern	32
Table 10 – Additional information on IoT component capabilities	33
Table 11 – Key capability transformations.....	35
Table 12 – IoT system pattern.....	36
Table A.1 – RAMI 4.0 pattern.....	38
Table A.2 – Dynamic IoT system pattern.....	40
Table A.3 – IoT enterprise system pattern.....	43
Table A.4 – IoT enterprise networking system.....	45
Table A.5 – IoT enterprise usage pattern	47
Table A.6 – Overview of activities and roles.....	51
Table A.7 – Overview of enterprise activities and roles	52

INTERNET OF THINGS (IoT) – REFERENCE ARCHITECTURE

FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC and ISO National bodies.
- 3) IEC and ISO documents have the form of recommendations for international use and are accepted by IEC and ISO National bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC and ISO documents is accurate, IEC and ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC and ISO National bodies undertake to apply IEC and ISO documents transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC and ISO document and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC and ISO do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC and ISO marks of conformity. IEC and ISO are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this document.
- 7) No liability shall attach to IEC and ISO or their directors, employees, servants or agents including individual experts and members of its technical committees and IEC and ISO National bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this ISO/IEC document or any other IEC and ISO documents.
- 8) Attention is drawn to the Normative references cited in this document. Use of the referenced publications is indispensable for the correct application of this document.
- 9) IEC and ISO draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC and ISO take no position concerning the evidence, validity, or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC and ISO had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch> and www.iso.org/patents. IEC and ISO shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 30141 has been prepared by subcommittee 41: Internet of Things and Digital Twin, of ISO/IEC joint technical committee 1: Information technology. It is an International Standard.

This second edition cancels and replaces the first edition published in 2018. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) conformance with ISO/IEC/IEEE 42010:2022;
- b) improved usability;
- c) implementation pattern support.

This is a preview of ISO/IEC 30141:2024. [Click here to purchase the full version from the ANSI store.](#)

The text of this International Standard is based on the following documents:

Draft	Report on voting
JTC1-SC41/417/FDIS	JTC1-SC41/431/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1, and the ISO/IEC Directives, JTC 1 Supplement available at www.iec.ch/members_experts/refdocs and www.iso.org/directives.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.
