CONTENTS

	<i>Page</i>
1 Introduction	1
1.1 General	1
1.2 Language survey	1
1.3 Modes and classes	2
1.4 Locations and their accesses	3
1.5 Values and their operations	3
1.6 Actions	4
1.7 Input and output	4
1.8 Exception handling	4
1.9 Time supervision	5
1.10 Program structure	5
1.11 Concurrent execution	5
1.12 General semantic properties	6
1.13 Implementation options	6
2 Preliminaries	7
2.1 The metalanguage	7
2.2 Vocabulary	8
2.3 The use of spaces	9
2.4 Comments	9
2.5 Format effectors	9
2.6 Compiler directives	10
2.7 Names and their defining occurrences	10
3 Modes and classes	12
3.1 General	12
3.2 Mode definitions	13
3.3 Mode classification	16
3.4 Discrete modes	17
3.5 Real modes	20
3.6 Powerset modes	22
3.7 Reference modes	22
3.8 Procedure modes	23
3.9 Instance modes	24
3.10 Synchronization modes	25
3.11 Input-Output Modes	26
3.12 Timing modes	28
3.13 Composite modes	29
3.14 Dynamic modes	37
3.15 Moreta Modes	38
4 Locations and their accesses	45
4.1 Declarations	45
4.2 Locations	47
5 Values and their operations	54
5.1 Synonym definitions	54
5.2 Primitive value	55
5.3 Values and expressions	70

6.1	General	79
6.2	Assignment action	79
6.3	If action	81
6.4	Case action	81
6.5	Do action	83
6.6	Exit action	86
6.7	Call action	87
6.8	Result and return action.....	90
6.9	Goto action.....	90
6.10	Assert action.....	91
6.11	Empty action	91
6.12	Cause action	91
6.13	Start action	91
6.14	Stop action.....	91
6.15	Continue action	92
6.16	Delay action	92
6.17	Delay case action.....	92
6.18	Send action.....	93
6.19	Receive case action	94
6.20	CHILL built-in routine calls.....	97
7	Input and Output	102
7.1	I/O reference model.....	102
7.2	Association values.....	104
7.3	Access values	104
7.4	Built-in routines for input output.....	105
7.5	Text input output	112
8	Exception handling	120
8.1	General	120
8.2	Handlers	121
8.3	Handler identification.....	121
9	Time supervision	122
9.1	General	122
9.2	Timeoutable processes	122
9.3	Timing actions.....	122
9.4	Built-in routines for time.....	124
10	Program Structure	125
10.1	General	125
10.2	Reaches and nesting	127
10.3	Begin-end blocks.....	129
10.4	Procedure specifications and definitions.....	129
10.5	Process specifications and definitions.....	134
10.6	Modules.....	134
10.7	Regions.....	135
10.8	Program.....	135
10.9	Storage allocation and lifetime.....	136
10.10	Constructs for piecewise programming.....	136
10.11	Genericity.....	141

11.1	Processes, tasks, threads and their definitions	144
11.2	Mutual exclusion and regions	145
11.3	Delaying of a thread	148
11.4	Re-activation of a thread	148
11.5	Signal definition statements	148
11.6	Completion of Region and Task locations	149
12	General semantic properties	149
12.1	Mode rules	149
12.2	Visibility and name binding	160
12.3	Case selection	167
12.4	Definition and summary of semantic categories	169
13	Implementation options	173
13.1	Implementation defined built-in routines	173
13.2	Implementation defined integer modes	173
13.3	Implementation defined floating point modes	173
13.4	Implementation defined process names	173
13.5	Implementation defined handlers	173
13.6	Implementation defined exception names	173
13.7	Other implementation defined features	173
Appendix I – Character set for CHILL		175
Appendix II – Special symbols		176
Appendix III – Special simple name strings		177
III.1	Reserved simple name strings	177
III.2	Predefined simple name strings	178
III.3	Exception names	178
Appendix IV – Program examples		179
IV.1	Operations on integers	179
IV.2	Same operations on fractions	179
IV.3	Same operations on complex numbers	180
IV.4	General order arithmetic	180
IV.5	Adding bit by bit and checking the result	180
IV.6	Playing with dates	181
IV.7	Roman numerals	182
IV.8	Counting letters in a character string of arbitrary length	183
IV.9	Prime numbers	184
IV.10	Implementing stacks in two different ways, transparent to the user	184
IV.11	Fragment for playing chess	185
IV.12	Building and manipulating a circularly linked list	188
IV.13	A region for managing competing accesses to a resource	189
IV.14	Queuing calls to a switchboard	190
IV.15	Allocating and deallocating a set of resources	190
IV.16	Allocating and deallocating a set of resources using buffers	192
IV.17	String scanner1	194
IV.18	String scanner2	195
IV.19	Removing an item from a double linked list	196
IV.20	Update a record of a file	196
IV.21	Merge two sorted files	197
IV.22	Read a file with variable length records	198
IV.23	The use of spec modules	199
IV.24	Example of a context	199
IV.25	The use of prefixing and remote modules	199

This is a preview of "ISO/IEC 9496:2003". Click here to purchase the full version from the ANSI store.

IV.27	A generic stack	201
IV.28	An abstract data type	202
IV.29	Example of a spec module	202
IV.30	Object-Orientation: Modes for Simple, Sequential Stacks	202
IV.31	Object-Orientation: Mode Extension: Simple, Sequential Stack with Operation "Top"	204
IV.32	Object-Orientation: Modes for Stacks with Access Synchronization	204
Appendix V – Decommited features		206
V.1	Free directive	206
V.2	Integer modes syntax	206
V.3	Set modes with holes	206
V.4	Procedure modes syntax	206
V.5	String modes syntax	207
V.6	Array modes syntax	207
V.7	Level structure notation	207
V.8	Map reference names	207
V.9	Based declarations	207
V.10	Character string literals	207
V.11	Receive expressions	207
V.12	Addr notation	207
V.13	Assignment syntax	207
V.14	Case action syntax	207
V.15	Do for action syntax	207
V.16	Explicit loop counters	208
V.17	Call action syntax	208
V.18	RECURSEFAIL exception	208
V.19	Start action syntax	208
V.20	Explicit value receive names	208
V.21	Blocks	208
V.22	Entry statement	208
V.23	Register names	208
V.24	Recursive attribute	208
V.25	Quasi cause statements and quasi handlers	209
V.26	Syntax of quasi statements	209
V.27	Weakly visible names and visibility statements	209
V.28	Weakly visible names and visibility statements	209
V.29	Pervasiveness	209
V.30	Seizing by modulation name	209
V.31	Predefined simple name strings	209
Appendix VI – Index of production rules		210

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of the joint technical committee is to prepare International Standards. Draft International Standards adopted by the technical committee are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 9496 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology, Subcommittee SC 22, Programming languages, their environments and system software interfaces*, in collaboration with ITU-T. The identical text is published as ITU-T Rec. Z.200.

This fourth edition cancels and replaces the third edition (ISO/IEC 9496:1998), which has been technically revised.
