Contents

Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	2
3 Principles	3
3.1 Conformance	3
3.2 Implications of the Language	3
3.2.1 Functional Mapping.....	3
3.2.2 Implementation and Host Dependencies	4
3.2.3 Error Handling.....	4
3.2.4 Data mapping	4
3.2.5 Multi-tasking.....	6
3.2.6 Packaging	6
3.2.7 Application Program Environment	7
3.2.8 Registration	7
4 Tables	8
4.1 Abbreviations used in procedure names	8
4.1.1 List of procedures using the abbreviations	8
4.1.2 Alphabetical by bound name	11
4.1.3 Alphabetical PHIGS functions	15
4.2 Data type definitions.....	15
4.2.1 Abbreviations used in the data type definitions	16
4.2.2 Alphabetical list of type definitions	16
4.2.3 Alphabetical List of Private Type Definitions	66
4.2.4 List of Constant Declarations.....	68
4.2.5 PHIGS Configuration Values.....	69
4.3 Error Codes	71
4.3.1 Precluded Error Codes	72

5 Functions in the Ada Binding of PHIGS	73
5.1 Control functions.....	73
5.2 Output primitive functions	74
5.3 Attribute specification functions	77
5.4 Transformation and clipping functions	84
5.5 Structure content functions.....	91
5.6 Structure manipulation functions.....	94
5.7 Structure display functions.....	95
5.8 Structure archive functions	95
5.9 Input functions.....	98
5.10 Metafile functions	106
5.11 Inquiry functions.....	107
5.12 Error control functions.....	132
5.13 Special interface functions	133
5.14 Additional Functions	134
5.14.1 Subprograms for Manipulating Input Data Records	134
5.14.2 PHIGS Generic Coordinate System Package	138
5.14.3 PHIGS Generic List Utility Package.....	141
5.14.4 PHIGS Name Set Facility Package.....	144
5.14.5 Deallocation of structure element records	147
5.14.6 Metafile Function Utilities.....	149
5.15 Conformal Variants	149
Annexes	
A Compilable PHIGS Specification	151
B Cross Reference Listing of Implementation Defined Items	243
C Example Programs	245
C.1 Example Program 1: STAR	245
C.2 Example Program 2: IRON	248
C.3 Example Program 3: DYNASTAR	255
C.4 Example Program 4: TRANSFORM POLYLINE.....	261
C.5 Example Program 5: SHOW_LINETYPES.....	269
D PHIGS Multi-Tasking	274

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) together form a system for worldwide standardization as a whole. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for approval before their acceptance as International Standards. They are approved in accordance with procedures requiring at least 75 % approval by the national bodies voting.

International Standard ISO/IEC 9593-3 was prepared by Technical Committee ISO/IEC JTC 1, *Information technology*.

Introduction

ISO/IEC 9592 is specified in a language independent manner and needs to be embedded in language dependent layers (language bindings) for use with particular programming languages.

The purpose of this part of ISO/IEC 9593 is to define a standard binding of PHIGS to the Ada computer programming language.

**Information technology — Computer graphics —
Programmer's Hierarchical Interactive Graphics System
(PHIGS) language bindings —**

**Part 3 :
Ada**

1 Scope

ISO/IEC 9592 specifies a language independent nucleus of a graphics system. For integration into a programming language, PHIGS is embedded in a language dependent layer obeying the particular conventions of that language. This part of ISO/IEC 9593 specifies such a language dependent layer for the Ada computer programming language.
