Foreword ..................................................................................................................................................... vi
Introduction .................................................................................................................................................. vii

1 Scope ..................................................................................................................................................... 1

2 Conformance ........................................................................................................................................... 1
  2.1 Intended Usage .................................................................................................................................. 1
  2.2 Conformance to processes .............................................................................................................. 2
  2.3 Conformance to information item content .................................................................................... 2
  2.4 Full conformance ............................................................................................................................ 2
  2.5 Tailored conformance ...................................................................................................................... 2
  2.5.1 Processes .................................................................................................................................... 2
  2.5.2 Information items ....................................................................................................................... 3

3 Normative references ............................................................................................................................ 3

4 Terms, definitions and abbreviated terms ............................................................................................. 3
  4.1 Terms and definitions ..................................................................................................................... 3
  4.2 Abbreviated terms ........................................................................................................................... 8

5 Concepts ................................................................................................................................................ 8
  5.1 Introduction ....................................................................................................................................... 8
  5.2 Requirements fundamentals ........................................................................................................... 8
  5.2.1 General ........................................................................................................................................ 8
  5.2.2 Stakeholders ................................................................................................................................ 8
  5.2.3 Transformation of needs into requirements .............................................................................. 9
  5.2.4 Requirements construct ............................................................................................................ 9
  5.2.5 Characteristics of individual requirements ............................................................................... 11
  5.2.6 Characteristics of a set of requirements .................................................................................. 11
  5.2.7 Requirement language criteria ................................................................................................. 12
  5.2.8 Requirements attributes ........................................................................................................... 12
  5.3 Practical considerations .................................................................................................................. 14
  5.3.1 Iteration and recursion of processes ....................................................................................... 14
  5.3.2 Iteration and recursion in requirements engineering ............................................................... 16
  5.4 Requirement information items ....................................................................................................... 17

6 Processes ................................................................................................................................................ 18
  6.1 Requirement processes ................................................................................................................... 18
  6.1.1 Guidelines for Processes .......................................................................................................... 19
  6.2 Stakeholder requirements definition process ................................................................................ 19
  6.2.1 Purpose ...................................................................................................................................... 19
  6.2.2 Outcomes .................................................................................................................................. 19
  6.2.3 Activities and tasks .................................................................................................................... 20
  6.3 Requirements analysis process ....................................................................................................... 27
  6.3.1 Purpose ...................................................................................................................................... 27
  6.3.2 Outcomes .................................................................................................................................. 27
  6.3.3 Activities and tasks .................................................................................................................... 27
  6.4 Requirements engineering activities in other technical processes ............................................... 33
  6.4.1 Requirements in architectural design ....................................................................................... 33
  6.4.2 Requirements in verification ................................................................................................... 34
  6.4.3 Requirements in validation ....................................................................................................... 36
  6.5 Requirements management ........................................................................................................... 37
  6.5.1 Management Overview ........................................................................................................... 37
  6.5.2 Change management ................................................................................................................ 37
  6.5.3 Measurement for requirements ................................................................................................. 39

**Annex A** (normative) System operational concept | 62 |
A.1 Overview | 62 |
A.2 Operational concept document (OpsCon) | 62 |
A.2.1 Scope | 63 |
A.2.2 Referenced documents | 63 |
A.2.3 Current system or situation | 63 |
A.2.4 Justification for and nature of changes | 66 |
A.2.5 Concepts for the proposed system | 68 |
A.2.6 Operational scenarios | 70 |
A.2.7 Summary of impacts | 71 |
A.2.8 Analysis of the proposed system | 72 |
A.2.9 Appendices | 73 |
A.2.10 Glossary | 73 |

**Annex B** (informative) Concept of operations | 74 |
B.1 Overview | 74 |
B.2 Concept of operation document | 74 |
B.2.1 Purpose | 74 |
B.2.2 Scope | 74 |
B.2.3 Strategic plan | 74 |
B.2.4 Effectiveness | 74 |
B.2.5 Overall operation | 74 |
B.2.6 Governance | 75 |

**Annex C** (informative) Process Mapping from ISO/IEC 15288 and ISO/IEC 12207 | 76 |
C.1 Stakeholder requirements definition process | 76 |
C.2 Requirements analysis Process | 77 |
C.3 Other technical requirements-related processes | 78 |

**Annex D** (normative) Tailoring policies | 80 |
D.1 Introduction | 80 |
D.2 Information item tailoring process | 80 |
D.2.1 Purpose | 80 |
D.2.2 Outcomes | 80 |
D.2.3 Activities and tasks | 80 |

Bibliography | 82 |
Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of ISO/IEC JTC 1 is to prepare International Standards. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is called to the possibility that implementation of this standard may require the use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. ISO/IEEE is not responsible for identifying essential patents or patent claims for which a license may be required, for conducting inquiries into the legal validity or scope of patents or patent claims or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance or a Patent Statement and Licensing Declaration Form, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from ISO or the IEEE Standards Association.

ISO/IEC/IEEE 29148 was prepared by Joint Technical Committee ISO/IEC JTC 1, Information technology, Subcommittee SC 7, Software and systems engineering, in cooperation with the Software & Systems Engineering Standards Committee of the IEEE Computer Society, under the Partner Standards Development Organization cooperation agreement between ISO and IEEE.
Introduction

This International Standard provides a unified treatment of the processes and products involved in engineering requirements throughout the life cycle of systems and software. This International Standard is the result of harmonization of the following sources:

ISO/IEC 12207:2008 (IEEE Std 12207-2008), Systems and software engineering — Software life cycle processes

ISO/IEC 15288:2008 (IEEE Std 15288-2008), Systems and software engineering — System life cycle processes

IEEE Std 830, IEEE Recommended Practice for Software Requirements Specifications

IEEE Std 1233, IEEE Guide for Developing System Requirements Specifications

IEEE Std 1362, IEEE Guide for Information Technology — System Definition — Concept of Operations (ConOps) Document

ISO/IEC/IEEE 24765, Systems and software engineering — Vocabulary
