## Contents

	Page
<b>Foreword</b> .....	<b>v</b>
<b>Introduction</b> .....	<b>vi</b>
<b>1 Scope</b> .....	<b>1</b>
<b>2 Terms and definitions</b> .....	<b>1</b>
<b>3 Abbreviated terms</b> .....	<b>2</b>
<b>4 Role of Enrolment in a Biometric System</b> .....	<b>3</b>
<b>5 Stakeholders and approaches for enrolment</b> .....	<b>5</b>
5.1 Enrolment Stakeholders.....	5
5.2 Enrolment Approaches.....	8
<b>6 Key Stakeholder perspectives</b> .....	<b>9</b>
6.1 Summary of key observations.....	9
6.2 Meeting the requirements of Stakeholders.....	10
6.2.1 Supporting the interests of the Subject.....	10
6.2.2 Information provided to the Applicant.....	11
6.2.3 Legal implications of the enrolment service.....	11
6.2.4 Issues related to inclusivity.....	12
6.2.5 Usability.....	12
6.2.6 Usability aspects — Effectiveness.....	12
6.2.7 Usability aspects — Efficiency.....	12
6.2.8 Usability aspects — Satisfaction with the enrolment process.....	12
6.2.9 Supporting the interests of the Enrolment Authority.....	13
6.2.10 Establishing the legal framework for enrolment.....	13
6.2.11 Independent review of the operation of the Service.....	14
6.2.12 Metrics of a successful biometric enrolment.....	14
6.2.13 Failure to Enrol and related failure rates.....	15
6.2.14 Analysis of enrolment failures.....	16
6.2.15 Analysis of poor quality enrolments.....	18
6.2.16 Strategy for corrective actions.....	19
6.2.17 Use of data for research.....	19
6.2.18 End-of-contract or contract reassignment actions.....	19
6.2.19 Supporting the interests of the Operator of the enrolment service.....	19
6.2.20 Development and maintenance of training programmes for personnel.....	20
6.2.21 System performance monitoring and correction actions.....	21
6.2.22 Service Improvement Actions.....	21
6.2.24 Participation in end-of-service or contract reassignment activities.....	22
6.2.25 Supporting the interests of Relying Parties.....	22
6.2.26 System Design and Developer's perspective.....	23
6.2.27 Pre-enrolment and scheduling processes.....	23
6.2.28 Confirmation of the biographic identity of the Applicant.....	24
6.2.29 Requirements of the verification system(s) which will depend on this enrolment.....	24
6.2.30 Selection of enrolment system.....	24
6.2.31 Physical design of the enrolment environment.....	24
6.2.32 Interfacing with the Applicant.....	24
6.2.33 Appropriate training of the Enrolment Officer and Attendants.....	25
6.2.34 Support Staff Training.....	25
6.2.35 Security.....	25
6.2.36 Number of attempts at collection of a biometric feature or maximum duration of collection time before timeout.....	26
6.2.37 Exception handling: enrolment and/or registration procedure for secure and effective fallback.....	26
6.2.38 Post enrolment verification session.....	27

## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: [Foreword — Supplementary information](#).

The committee responsible for this document is ISO/IEC JTC 1, *Information technology*, Subcommittee SC 37, *Biometrics*.

## Introduction

One of the most important contributions to a successful biometric-based recognition system is a consistent enrolment service that generates the biometric data required for subsequent recognition of individuals. Subsequent verifications or identifications will be compared with the biometric data collected at enrolment. If the quality of capture at enrolment is not maintained consistently, the operators of a recognition system which depends on a good enrolment are likely to experience unreliable performance. For those who are enrolled in a verification system, a poor quality enrolment will result in inconvenience should they fail to be recognized. (Readers of this report should note that quality has a specific meaning when applied to biometric systems; a high quality capture is one that results in biometric data that provides good match scores when compared with other high quality images from the same biometric feature.)

By analysing the requirements for a good enrolment from the perspectives of a range of stakeholders, it is possible to derive a set of principles to guide the development of a biometric enrolment policy and the deployment of a service. Where enrolment is outsourced to a third party, it is extremely important to be able to measure quality metrics rather than quantity metrics, since the technical and business objectives of the two organisations (the Relying Party and the Enrolment Authority as defined in this document) may, in general, not be aligned.

Although the recommendations and guidelines in this report are directed in the main at the parties responsible for the enrolment itself and for management of the enrolment service (noting that these two entities may be one and the same), they will also be of value to the designers and developers of enrolment systems.
