## Contents

1. Overview .....	1
1.1 Scope .....	1
1.2 Purpose .....	2
1.3 Context .....	2
2. Normative references.....	2
3. Definitions, acronyms, and abbreviations .....	2
3.1 Definitions .....	3
3.2 Acronyms and abbreviations .....	3
4. Introduction to ISO/IEEE 11073 personal health devices .....	4
4.1 General .....	4
4.2 Introduction to ISO/IEEE 11073-20601 modeling constructs .....	4
5. Peak expiratory flow monitor device concepts and modalities.....	5
5.1 General .....	5
5.2 PEF .....	5
6. Peak expiratory flow monitor domain information model .....	7
6.1 Overview .....	7
6.2 Class extensions.....	7
6.3 Object instance diagram .....	7
6.4 Types of configuration.....	9
6.5 Medical device system object .....	9
6.6 Numeric objects.....	13
6.7 Real-time sample array objects.....	20
6.8 Enumeration objects .....	20
6.9 PM-store objects .....	22
6.10 Scanner objects .....	22
6.11 Class extension objects .....	22
6.12 Peak expiratory flow monitor information model extensibility rules .....	22
7. Peak expiratory flow monitor service model.....	22
7.1 General .....	22
7.2 Object access services.....	22
7.3 Object access event report services .....	23

8. Peak expiratory flow monitor communication model .....	24
8.1 Overview .....	24
8.2 Communications characteristics .....	24
8.3 Association procedure .....	24
8.4 Configuring procedure.....	26
8.5 Operating procedure .....	28
8.6 Time synchronization .....	29
9. Test associations.....	29
9.1 Behavior with standard configuration.....	29
9.2 Behavior with extended configurations .....	30
10. Conformance .....	30
10.1 Applicability .....	30
10.2 Conformance specification .....	30
10.3 Levels of conformance .....	30
10.4 Implementation conformance statements .....	31
Annex A (informative) Bibliography .....	36
Annex B (normative) Any additional ASN.1 definitions .....	37
Annex C (normative) Allocation of identifiers.....	38
Annex D (informative) Message sequence examples .....	39
Annex E (informative) Protocol data unit examples .....	41
Annex F (informative) IEEE list of participants .....	52

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

IEEE Standards documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is called to the possibility that implementation of this standard may require the use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. ISO/IEEE is not responsible for identifying essential patents or patent claims for which a license may be required, for conducting inquiries into the legal validity or scope of patents or patent claims or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance or a Patent Statement and Licensing Declaration Form, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of this standard are expressly advised that determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information may be obtained from ISO or the IEEE Standards Association.

ISO/IEEE 11073-10421 was prepared by the IEEE 11073 Standards Committee of the IEEE Engineering in Medicine and Biology Society (as IEEE Std 11073-10421-2010). It was adopted by Technical Committee ISO/TC 215, *Health informatics*, in parallel with its approval by the ISO member bodies, under the "fast-track procedure" defined in the Partner Standards Development Organization cooperation agreement between ISO and IEEE. IEEE is responsible for the maintenance of this document with participation and input from ISO member bodies.

ISO/IEEE 11073 consists of the following parts, under the general title *Health informatics — Personal health device communication* (text in parentheses gives a variant of subtitle):

- Part 10101: (*Point-of-care medical device communication*) *Nomenclature*
- Part 10201: (*Point-of-care medical device communication*) *Domain information model*
- Part 10404: *Device specialization — Pulse oximeter*
- Part 10407: *Device specialization — Blood pressure monitor*
- Part 10408: *Device specialization — Thermometer*
- Part 10415: *Device specialization — Weighing scale*

- Part 10417: Device specialization — Glucose meter
- Part 10420: Device specialization — Body composition analyzer
- Part 10421: Device specialization — Peak expiratory flow monitor (peak flow)
- Part 10471: Device specialization — Independant living activity hub
- Part 10472: Device specialization — Medication monitor
- Part 20101: (Point-of-care medical device communication) Application profiles — Base standard
- Part 20601: Application profile — Optimized exchange protocol
- Part 30200: (Point-of-care medical device communication) Transport profile — Cable connected
- Part 30300: (Point-of-care medical device communication) Transport profile — Infrared wireless
- Part 30400: (Point-of-care medical device communication) Interface profile — Cabled Ethernet
- Part 90101: (Point-of-care medical device communication) Analytical instruments — Point-of-care test
- Part 91064: (Standard communication protocol) Computer-assisted electrocardiography
- Part 92001: (Medical waveform format) — Encoding rules

## Introduction

This introduction is not part of IEEE Std 11073-10421-2010, Health informatics—Personal health device communication—Part 10421: Device specialization—Peak expiratory flow monitor (peak flow).

ISO/IEEE 11073 standards enable communication between medical devices and external computer systems. This document uses the optimized framework created in IEEE Std 11073-20601-2008<sup>a</sup> and describes a specific, interoperable communication approach for weighing scales. These standards align with, and draw upon, the existing clinically focused standards to provide support for communication of data from clinical or personal health devices
