First edition
1999-10-01

Enclosed gear drives for industrial applications

Transmissions de puissance par engrenages sous carter pour usage industriel

Reference number
ISO/TR 13593:1999(E)

Contents

1 Scope	1
2 Normative references	1
3 Symbols, terms and definitions	2
4 Application and design considerations	5
5 Components	7
6 Lubrication and lubricants	17
7 Thermal rating	20
8 Measurement of sound and vibration	24
9 Selection factor, K_{Sf}	24
10 Marking	27
11 Customer responsibility, transportation, installation and storage	28
12 Operation and maintenance	28
13 Test and inspection	29
Annex A (informative) Selection factors	30
Annex B (informative) Other enclosed gear drive components	37
Annex C (informative) Thermal calculations	39
Annex D (informative) Alternate thermal calculations	48
Annex E (informative) Customer responsibility, storage, transportation, installation and testing	70
Annex F (informative) Testing and inspection	74
Bibliography	77

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The main task of technical committees is to prepare International Standards, but in exceptional circumstances a technical committee may propose the publication of a Technical Report of one of the following types:

- type 1, when the required support cannot be obtained for the publication of an International Standard, despite repeated efforts;
- type 2, when the subject is still under technical development or where for any other reason there is a future but not immediate possibility of an agreement on an International Standard;
- type 3, when a technical committee has collected data of a different kind from that which is normally published as an International Standard ("state of the art", for example).

Technical Reports of types 1 and 2 are subject to review within three years of publication, to decide whether they can be transformed into an International Standard. Technical Reports of type 3 do not necessarily have to be reviewed until the data they provide are considered to be no longer valid or useful.

ISO/TR 13593, which is a Technical Report of type 2, was prepared by Technical Committee ISO/TC 60, *Gears*.

This document is being issued in the Technical Report (type 2) series of publications (according to subclause G.3.2.2 of Part 1 of the ISO/IEC Directives, 1995) as a "prospective standard for provisional application" in the field of gearing because there is an urgent need for guidance on how standards in this field should be used to meet an identified need.

This Technical Report is not to be regarded as an "International Standard". It is proposed for provisional application so that information and experience of its use in practice may be gathered. Comments on the content of this document should be sent to the ISO Central Secretariat.

A review of this Technical Report (type 2) will be carried out not later than three years after its publication with the options of: extension for another three years; conversion into an International Standard; or withdrawal.

Annexes A to F of this Technical Report are for information only.
