Piston-operated volumetric instruments — Determination of uncertainty for volume measurements made using the photometric method

*Instruments volumétriques actionnés par piston — Détermination de
l'incertitude de mesure pour les mesurages volumétriques au moyen de
la méthode photométrique*

Foreword	iv
1 Scope	1
2 Uncertainty analysis for the replaceable cell photometric method as described in ISO 8655-7:—, Annex A.....	1
2.1 Uncertainties of each measurand.....	1
2.2 Mathematical model of method.....	2
2.3 Sensitivity coefficients	3
2.4 Uncertainty budget.....	14
3 Uncertainty analysis for the flow cell photometric method as given in ISO 8655-7:—, Annex B	16
3.1 Uncertainties of each measurand.....	16
3.2 Mathematical model of method.....	16
3.3 Sensitivity coefficients	16
3.4 Combined standard uncertainty	25
4 Traceability of the method.....	25
5 Validation of photometric method	26
5.1 Principle of validation	26
5.2 Equipment for validation	26
5.3 Density of solutions	26
5.4 Experimental results	26
5.5 Additional validation studies of the photometric method	27
Bibliography.....	28

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

In exceptional circumstances, when a technical committee has collected data of a different kind from that which is normally published as an International Standard ("state of the art", for example), it may decide by a simple majority vote of its participating members to publish a Technical Report. A Technical Report is entirely informative in nature and does not have to be reviewed until the data it provides are considered to be no longer valid or useful.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/TR 16153 was prepared by Technical Committee ISO/TC 48, *Laboratory glassware and related apparatus*.
