Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

In exceptional circumstances, when a technical committee has collected data of a different kind from that which is normally published as an International Standard ("state of the art", for example), it may decide by a simple majority vote of its participating members to publish a Technical Report. A Technical Report is entirely informative in nature and does not have to be reviewed until the data it provides are considered to be no longer valid or useful.

Attention is drawn to the possibility that some of the elements of ISO/TR 19121 may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/TR 19121, was prepared by Technical Committee ISO/TC 211, *Geographic information/Geomatics*, in collaboration with:

- Committee on Earth Observation Satellites (CEOS)
- Digital Geographic Information Working Group (DGIWG)
- International Hydrographic Organization (IHO)
- Open GIS Consortium, Inc. (OGC)
- ISO/IEC JTC 1/SC 24
