## Contents

	Page
<b>Foreword</b> .....	<b>iv</b>
<b>1 Scope</b> .....	<b>1</b>
<b>2 International Standards</b> .....	<b>1</b>
2.1 Basic machinery vibration standards.....	1
2.2 Related machinery vibration standards.....	2
2.3 Additional machinery vibration standards.....	2
<b>3 Terms and definitions</b> .....	<b>3</b>
<b>4 Evaluation of machine vibration</b> .....	<b>3</b>
4.1 General.....	3
4.2 Machinery vibration standards and criteria.....	3
4.3 Classification of severity of machine vibration.....	4
4.4 Measurement procedures and instrumentation.....	4
4.5 Vibration standards summaries.....	4
<b>5 Measurements made on non-rotating parts</b> .....	<b>5</b>
<b>6 Measurements made on rotating parts</b> .....	<b>8</b>
<b>7 Related standards</b> .....	<b>9</b>
<b>8 Analytical guidelines for selecting the appropriate vibration standard for specific machinery</b> .....	<b>11</b>
8.1 General.....	11
8.2 Basic relations for rotating shaft and pedestal vibration.....	14
<b>Annex A (informative) Bearing dynamics</b> .....	<b>16</b>
<b>Annex B (informative) Pedestal dynamic stiffness</b> .....	<b>19</b>
<b>Annex C (informative) Examples of typical values of dynamic stiffness for bearings and pedestals</b> .....	<b>20</b>
<b>Annex D (informative) Dynamic stiffness of the bearing part combined with the pedestal</b> .....	<b>22</b>
<b>Annex E (informative) International machinery vibration standards shown by application area</b> .....	<b>24</b>
<b>Bibliography</b> .....	<b>28</b>

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2, [www.iso.org/directives](http://www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received, [www.iso.org/patents](http://www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

The committee responsible for this document is ISO/TC 108, *Mechanical vibration, shock and condition monitoring*, Subcommittee SC 2, *Measurement and evaluation of mechanical vibration and shock as applied to machines, vehicles and structures*.
