## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Project Committee ISO/PC 317, *Consumer Protection – privacy by design for consumer goods and services*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

## Introduction

ISO 31700-1<sup>[1]</sup> provides high-level requirements and recommendations for organizations using privacy by design in the development, maintenance and operation of consumer goods and services. These are grounded in a consumer-focused approach, in which consumer privacy rights and preferences are placed at the heart of product development and operation.

Use case help to identify, clarify and organize system requirements related to a set of goals, by illustrating a series of possible sequences of interactions between stakeholder(s) and system(s) in a particular ecosystem.

The use cases in this document use a template that is based on IEC 62559-2<sup>[2]</sup> while enabling a focus on privacy by design challenges and on the ISO 31700-1 requirements.

Although there are a wide range of use cases, this document provides three sample use cases to help further understand the implementation of ISO 31700-1: on-line retailing, a fitness company and smart locks.
