Contents

	Page
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols and subscripts	2
5 Description and detection of pulsating flow	4
5.1 Nature of pipe flows.....	4
5.2 Threshold between steady and pulsating flow.....	4
5.2.1 General.....	4
5.2.2 Differential pressure (DP) type flowmeters.....	5
5.2.3 Turbine flowmeters.....	5
5.2.4 Vortex flowmeters.....	6
5.3 Causes of pulsation.....	6
5.4 Occurrence of pulsating flow conditions in industrial and laboratory flowmeter installations.....	6
5.5 Detection of pulsation and determination of frequency, amplitude and waveform.....	7
5.5.1 General.....	7
5.5.2 Characteristics of the ideal pulsation sensor.....	7
5.5.3 Non-intrusive techniques.....	7
5.5.4 Insertion devices.....	8
5.5.5 Signal analysis on existing flowmeter outputs: software tools.....	8
6 Measurement of the mean flowrate of a pulsating flow	10
6.1 Orifice plate, nozzle, and Venturi tube.....	10
6.1.1 Description of pulsation effects and parameters.....	10
6.1.2 Flowmeters using slow-response DP sensors.....	12
6.1.3 Flowmeters using fast-response DP sensors.....	14
6.1.4 Pulsation damping.....	15
6.2 Turbine flowmeters.....	20
6.2.1 Description of pulsation effects and parameters.....	20
6.2.2 Estimation of pulsation correction factors and measurement uncertainties.....	23
6.3 Vortex flowmeters.....	24
6.3.1 Pulsation effects.....	24
6.3.2 Minimizing pulsation effects.....	25
6.3.3 Estimation of measurement uncertainties.....	25
Annex A (informative) Orifice plates, nozzles and Venturi tubes — Theoretical considerations	27
Annex B (informative) Orifice plates, nozzles and Venturi tubes — Pulsation damping criteria	34
Annex C (informative) Turbine flowmeters — Theoretical background and experimental data	40
Bibliography	44

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html

This document was prepared by Technical Committee ISO/TC 30, *Measurement of fluid flow in closed conduits*, Subcommittee SC 2, *Pressure differential devices*.

This fourth edition of ISO/TR 3313:2018 is a technical revision of ISO/TR 3313:1998, which was withdrawn in 2013.
