Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	1
5 Reagents	2
6 Apparatus	2
7 Sampling	3
8 Procedure	3
8.1 General operating instructions.....	3
8.2 Test portion.....	4
8.3 Blank test.....	4
8.4 Determination.....	4
8.4.1 Dissolution of the test portion.....	4
8.4.2 Filtration of the non-combined carbon.....	4
8.4.3 Measurements.....	4
8.5 Establishing the calibration curve.....	5
8.5.1 Primary product calibration.....	5
8.5.2 Calibration by means of certified reference materials.....	5
9 Expression of results	6
9.1 Primary product calibration.....	6
9.2 Calibration by means of certified reference materials.....	6
10 Precision	6
11 Notes on the procedure	7
11.1 Preliminary blank tests.....	7
11.2 Preliminary tests on certified reference materials.....	7
12 Test report	7
Annex A (informative) Additional information on the international interlaboratory test	8
Annex B (informative) Comparison between the results of the first and the second precision tests	10
Annex C (informative) Effect of fine material in a sample on the determination of non-combined carbon content	11
Bibliography	14

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/TC 17, *Steel*, Subcommittee SC 1, *Methods of determination of chemical composition*.

This first edition Technical Specification replaces the first edition Technical Report (ISO/TR 10719:1994), which has been technically revised. The following changes have been made:

- steels have been deleted from the scope;
- the possibility to establish the calibration curve by means of certified reference materials has been added;
- assessment of the precision data has been revised.
