|---|------------|
| Foreword | v |
| Introduction | vii |
| 1 Scope | 1 |
| 2 Normative references | 1 |
| 3 Terms and definitions | 1 |
| 4 Abbreviated terms | 3 |
| 5 Nanomaterial types and characteristics | 5 |
| 5.1 General..... | 5 |
| 5.2 Fullerenes..... | 5 |
| 5.3 Carbon nanotubes..... | 5 |
| 5.4 Graphene..... | 5 |
| 5.5 Nanowires..... | 6 |
| 5.6 Quantum dots..... | 6 |
| 5.7 Metals and metal oxides, ceramics..... | 6 |
| 5.8 Carbon black..... | 6 |
| 5.9 Organic nanoparticles..... | 6 |
| 5.10 Dendrimers..... | 6 |
| 5.11 Nanoclays..... | 6 |
| 6 Nanomaterial hazard, exposure and risk | 7 |
| 6.1 General..... | 7 |
| 6.2 Risk to health..... | 7 |
| 6.2.1 Hazard information..... | 7 |
| 6.2.2 Exposure..... | 8 |
| 6.3 Risks to safety..... | 10 |
| 6.3.1 Hazard information..... | 10 |
| 6.3.2 Risk of fire and explosion from NOAA..... | 10 |
| 7 General approach to managing risks from NOAA | 11 |
| 8 Identification and competence of person conducting risk assessment | 12 |
| 9 Information collection | 12 |
| 10 Health risk evaluation | 13 |
| 10.1 General..... | 13 |
| 10.2 Hazard assessment..... | 14 |
| 10.3 Exposure assessment..... | 14 |
| 10.4 Health risk assessment and prioritization..... | 15 |
| 10.5 Document and review..... | 15 |
| 11 Control of risk | 15 |
| 11.1 Hierarchy of control..... | 15 |
| 11.2 Control measures..... | 16 |
| 11.2.1 General..... | 16 |
| 11.2.2 Elimination..... | 16 |
| 11.2.3 Substitution/modification..... | 16 |
| 11.2.4 Enclosures/isolation..... | 16 |
| 11.2.5 Engineering controls..... | 16 |
| 11.2.6 Administrative controls..... | 17 |
| 11.2.7 Personal protective equipment..... | 17 |
| 11.3 Selection of controls..... | 18 |
| 11.3.1 General..... | 18 |
| 11.3.2 Hazard-based control..... | 18 |
| 11.3.3 Control banding and other qualitative approaches..... | 19 |
| 11.3.4 Safety-by-design approach..... | 19 |

|--|--|-----------|
| 11.5 | Information, instruction and training..... | 20 |
| 12 | Measurement methods..... | 21 |
| 12.1 | Need for measurement..... | 21 |
| 12.2 | Selection of instruments..... | 21 |
| 12.3 | Sampling strategy..... | 24 |
| 12.3.1 | Air sampling..... | 24 |
| 12.3.2 | Surface sampling..... | 25 |
| 12.4 | Limitations..... | 26 |
| 13 | Health surveillance..... | 27 |
| 14 | Spillages and accidental releases..... | 27 |
| 15 | Disposal procedures..... | 28 |
| 15.1 | General..... | 28 |
| 15.2 | Planification of storage and disposal of nanomaterials | 28 |
| 15.3 | Storage of nanomaterial waste prior to disposal | 30 |
| 15.3.1 | General..... | 30 |
| 15.3.2 | Storage in waste containers..... | 30 |
| 15.3.3 | Storage in plastic bags..... | 30 |
| 15.4 | Disposal of nanomaterial waste..... | 30 |
| 16 | Prevention of fire and explosion..... | 31 |
| Annex A (informative) NOAA categories..... | | 33 |
| Annex B (informative) Additional information on dermal and ocular exposure..... | | 34 |
| Annex C (informative) Guidance and articles on “State of the art” approaches to control measures..... | | 35 |
| Bibliography..... | | 36 |

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 229, *Nanotechnologies*.

This second edition cancels and replaces the first edition (ISO/TS 12901-1:2012), which has been technically revised.

The main changes are as follows:

- clauses have been updated and new references have been added to reflect recent research findings;
- a new subclause dedicated to graphene has been introduced in [Clause 5](#);
- [Clause 6](#) has been reorganized and eye exposure and accidental injection risks have been added for potential risk considerations from other potential routes of exposure;
- [subclause 6.3](#) has been expanded and reorganized into two subclauses;
- [Figure 1](#) has been added to [Clause 7](#);
- text related to protection from ocular exposure has been added in [11.2](#) and substantial changes have been made to the personal protective equipment subclause;
- a new subclause, [11.3.4](#), has been introduced, focusing on safety by design;
- In [11.3.5](#) concerning state-of-the-art approaches, the reference to Clause A.1 has been removed and replaced with references to ISO/TR 12885 and other relevant documents;
- in [11.4](#), which discusses the evaluation of control measures, Clauses A.2 to A.4 have been removed and references to ISO/TR 18637:2016 and other relevant documents have been incorporated;
- [Tables 1, 2 and 3](#) have been added;
- significant changes have been implemented in [Clause 15](#);
- [Annexes A, B and C](#) have been added.

The field of nanotechnologies continues to advance rapidly through the development of new materials, products and applications. At the same time, many questions have been raised relating to the potential risks to human health and to the environment of some of these new nanomaterials. Several research programs have been launched at the international level to better understand and quantify these risks. Although some research is already published, this effort will need to continue for some time, as those involved in the development and use of nanomaterials need to assess the risks of nanotechnologies and to implement effective risk management approaches based on the best available evidence. International standardization on nanotechnologies should contribute to realizing the potential of this technology for the betterment and sustainability of our world through economic development, improving the quality of life, and also for improving and protecting public health and the environment.

This document supports this aim by describing the principles of an occupational risk management framework for nano-objects, and their aggregates and agglomerates (NOAA) greater than 100 nm and gives practical advice on its implementation based on the best current emerging evidence concerning the potential risks of nanomaterials. ISO/TS 12901-2 describes a specific approach based on control banding to further support the implementation of good practice in this area^[1].

This document applies to such components, whether in their original form or incorporated in materials or preparations from which they can be released during their life cycle. However, as for many other industrial processes, nanotechnological processes can generate by-products in the form of unintentionally produced NOAAs, that can be linked to health and safety issues that need to be addressed as well.
