Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Intentions	3
4.1 Intention of the framework.....	3
4.2 Intention of BIM guidance documents.....	4
4.3 Overview of framework sections.....	4
5 Formal aspects of BIM information exchange	5
5.1 General recommendations.....	5
5.2 Delivery agreement.....	5
5.3 Specification of content.....	5
5.4 Acceptance.....	6
5.5 Owner's rights and rights for use of information.....	6
5.6 Responsibility.....	6
5.7 Traceability.....	6
5.8 Compliance.....	6
5.9 Implications of non-compliance.....	6
6 The framework for the BIM guidance document	7
6.1 Overview of the framework.....	7
6.2 Integrity.....	7
6.3 Extensions.....	8
6.4 Clauses.....	8
7 Relationships with other International Standards	9
7.1 Review.....	9
7.2 Development of new areas of application.....	9
7.3 Specialized application areas.....	9
7.4 Schemas for facility information.....	9
7.5 Classification structures and language usage.....	10
Annex A (normative) Guidance on building information modelling	11
Annex B (informative) Example of guidance on building information modelling for architectural quantity take off (QTO) report	18
Annex C (informative) Example using structured clauses for guidance on building information modelling for architectural quantity take off	21
Bibliography	25

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

In other circumstances, particularly when there is an urgent market requirement for such documents, a technical committee may decide to publish other types of document:

- an ISO Publicly Available Specification (ISO/PAS) represents an agreement between technical experts in an ISO working group and is accepted for publication if it is approved by more than 50 % of the members of the parent committee casting a vote;
- an ISO Technical Specification (ISO/TS) represents an agreement between the members of a technical committee and is accepted for publication if it is approved by 2/3 of the members of the committee casting a vote.

An ISO/PAS or ISO/TS is reviewed after three years in order to decide whether it will be confirmed for a further three years, revised to become an International Standard, or withdrawn. If the ISO/PAS or ISO/TS is confirmed, it is reviewed again after a further three years, at which time it must either be transformed into an International Standard or be withdrawn.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/TS 12911 was prepared by Technical Committee ISO/TC 59, *Buildings and civil engineering works*, Subcommittee SC 13, *Organization of information about construction works*.
