3.29	Representing substitutable relationship between items.....	55
3.29.1	Required cutting_tool_schema entities	55
3.29.2	Representation	55
3.29.3	ISO 10303-21 example.....	57
3.30	Representing digital documents.....	57
3.30.1	Required cutting_tool_schema entities	57
3.30.2	Representation	58
3.30.3	ISO 10303-21 example.....	59
3.31	Representing DMU structures with 3D models	59
3.31.1	Required cutting_tool_schema entities	59
3.31.2	Representation	60
3.31.3	ISO 10303-21 example.....	61
3.32	Representing DMU structures with 2D models	62
3.32.1	Required cutting_tool_schema entities	62
3.32.2	Representation	62
3.32.3	ISO 10303-21 example.....	64
3.33	Representing external models as 3D	65
3.33.1	Required cutting_tool_schema entities	65
3.33.2	Representation	65
3.33.3	ISO 10303-21 example.....	66
3.34	Representing external model as 2D	66
3.34.1	Required cutting_tool_schema entities	66
3.34.2	Representation	67
3.34.3	ISO 10303-21 example.....	68
3.35	Representing physical items.....	68
3.35.1	Required cutting_tool_schema entities	68
3.35.2	Representation	69
3.35.3	ISO 10303-21 example.....	70
3.36	Representing physical items based on an item	70
3.36.1	Required cutting_tool_schema entities	70
3.36.2	Representation	71
3.36.3	ISO 10303-21 example.....	72
3.37	Representing realized item definition relationship.....	72
3.37.1	Required cutting_tool_schema entities	72
3.37.2	Representation	73
3.37.3	ISO 10303-21 example.....	74
3.38	Representing physical item structures	74
3.38.1	Required cutting_tool_schema entities	74
3.38.2	Representation	74
3.38.3	ISO 10303-21 example.....	75
3.39	Representing work piece feature.....	76
3.39.1	Required cutting_tool_schema entities	76
3.39.2	Representation	76
3.39.3	ISO 10303-21 example.....	77
3.40	Representing grade.....	77
3.40.1	Required cutting_tool_schema entities	77
3.40.2	Representation	77
3.40.3	ISO 10303-21 example.....	79
Annex A (informative) Complete ISO 10303-21 file of the examples		80

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

In other circumstances, particularly when there is an urgent market requirement for such documents, a technical committee may decide to publish other types of document:

- an ISO Publicly Available Specification (ISO/PAS) represents an agreement between technical experts in an ISO working group and is accepted for publication if it is approved by more than 50 % of the members of the parent committee casting a vote;
- an ISO Technical Specification (ISO/TS) represents an agreement between the members of a technical committee and is accepted for publication if it is approved by 2/3 of the members of the committee casting a vote.

An ISO/PAS or ISO/TS is reviewed after three years in order to decide whether it will be confirmed for a further three years, revised to become an International Standard, or withdrawn. If the ISO/PAS or ISO/TS is confirmed, it is reviewed again after a further three years, at which time it must either be transformed into an International Standard or be withdrawn.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO/TS 13399-150 was prepared by Technical Committee ISO/TC 29, *Small tools*.

ISO 13399 consists of the following parts, under the general title *Cutting tool data representation and exchange*:

- *Part 1: Overview, fundamental principles and general information model*
- *Part 2: Reference dictionary for the cutting items* [Technical Specification]
- *Part 3: Reference dictionary for tool items* [Technical Specification]
- *Part 4: Reference dictionary for adaptive items* [Technical Specification]
- *Part 5: Reference dictionary for assembly items* [Technical Specification]
- *Part 50: Reference dictionary for reference systems and common concepts* [Technical Specification]
- *Part 60: Reference dictionary for connection systems* [Technical Specification]
- *Part 100: Definitions, principles and methods for reference dictionaries* [Technical Specification]
- *Part 150: Usage guidelines* [Technical Specification]
