Foreword ... **vi**

Introduction ... **viii**

1 Scope ... **1**

2 Normative references ... **1**

3 Starting elements, coordinate systems, planes ... **2**
3.1 General ... 2
3.2 Reference system ... 2
3.3 Coordinate system at the cutting part ... 3
3.4 Planes ... 4
3.5 Design of the pocket seat and cutting reference point (CRP) of the insert ... 5
3.6 Adjustment coordinate system on workpiece side ... 8
3.6.1 General ... 8
3.6.2 Designation of the coordinate system workpiece side ... 8

4 Design of the model ... **9**
4.1 General ... 9
4.2 Necessary parameters for the connection interface feature ... 9
4.3 Necessary properties for inserts ... 10
4.3.1 General ... 10
4.3.2 Properties for equilateral, equiangular and equilateral, non-equiangular inserts ... 10
4.3.3 Properties for non-equilateral, equiangular and non-equilateral, non-equiangular inserts ... 11
4.3.4 Design of the pocket seat feature ... 11

5 End mill, non-centre cutting, single row ... **11**
5.1 General ... 11
5.2 Necessary properties ... 12
5.3 Basic geometry ... 13
5.4 Determination of the position of the mounting coordinate system of insert ... 13
5.5 Chip flute and pocket seat ... 14
5.6 Assembly of a single row, non-centre cutting end mill ... 15

6 Single row, non-centre cutting V-groove end mill ... **16**
6.1 General ... 16
6.2 Necessary properties ... 17
6.3 Basic geometry ... 17
6.4 Determination of the position of the mounting coordinate system of insert ... 17
6.5 Chip flute and pocket seat ... 18
6.6 Single row, non-centre cutting V-groove end mill assembly ... 19

7 Single row, non-centre-cutting dovetail end mill ... **20**
7.1 General ... 20
7.2 Necessary properties ... 20
7.3 Basic geometry ... 21
7.4 Determination of the position of the mounting coordinate system of insert ... 21
7.5 Chip flute and pocket seat ... 21
7.6 Single row, non-centre-cutting dovetail end mill assembly ... 22

8 T-slot end mill ... **22**
8.1 General ... 22
8.2 Necessary properties ... 23
8.3 Basic geometry ... 23
8.4 Determination of the position of the mounting coordinate system of insert ... 23
8.5 Chip flute and pocket seat ... 24
8.6 Assembly of a T-slot end mill ... 25

9 Single row, rounded end mill 26
9.1 General 26
9.2 Necessary properties 27
9.3 Basic geometry 27
9.4 Determination of the position of the mounting coordinate system of insert 28
9.5 Chip flute and pocket seat 28
9.6 Assembly of a rounded end mill 30

10 Threading end mill 30
10.1 General 30
10.2 Necessary properties 31
10.3 Basic geometry 32
10.4 Determination of the position of the mounting coordinate system of insert 32
10.5 Chip flute and pocket seat 33
10.6 Assembled threading end mill 34

11 End mill, non-centre-cutting, multiple rows 35
11.1 General 35
11.2 Necessary properties 35
11.3 Basic geometry 36
11.4 Determination of the position of the mounting coordinate system of insert 36
11.5 Chip flute and pocket seat 38
11.6 Multiple rows, non-centre-cutting end mill assembly 39

12 Angular end mill, non-centre-cutting, multiple rows 40
12.1 General 40
12.2 Necessary properties 40
12.3 Basic geometry 41
12.4 Determination of the position of the mounting coordinate system of insert 41
12.5 Chip flute and pocket seat 41
12.6 Multiple rows non-centre-cutting angular end mill assembly 42

13 End mill, centre-cutting, multiple rows 42
13.1 General 42
13.2 Necessary properties 43
13.3 Basic geometry 43
13.4 Determination of the position of the mounting coordinate system of insert 43
13.5 Chip flute and pocket seat 44
13.6 Multiple rows, centre-cutting angular end mill assembly 45

14 Spot-facing end mill 46
14.1 General 46
14.2 Necessary properties 46
14.3 Basic geometry 47
14.4 Determination of the position of the mounting coordinate system of insert 47
14.5 Chip flute and pocket seat 47
14.6 Assembled spot-facing end mill 49

15 Straight ball-nosed end mill 49
15.1 General 49
15.2 Necessary properties 50
15.3 Basic geometry 50
15.4 Determination of the position of the mounting coordinate system of insert 51
15.5 Chip flute and pocket seat 52
15.6 Straight ball-nosed end mill assembly 53

16 Angular ball-nosed end mill 53
16.1 General 53
16.2 Necessary properties 54
16.3 Basic geometry 54
16.4 Determination of the position of the mounting coordinate system of insert 54
16.5 Chip flute and pocket seat 54

16.6 Angular ball-nosed end mill assembly 54
17 Die and mould end mill 54
17.1 General 54
17.2 Necessary properties 55
17.3 Basic geometry 56
17.4 Determination of the position of the mounting coordinate system of insert 56
17.5 Chip flute and pocket seat 56
17.6 Die end mill assembly 58
18 Bell-style end mill 58
18.1 General 58
18.2 Necessary properties 59
18.3 Basic geometry 60
18.4 Determination of the position of the mounting coordinate system of insert 60
18.5 Chip flute and pocket seat 61
18.6 Bell-style end mill assembly 61
19 Design of details 61
19.1 Basis for modelling 61
19.2 Fixing threads for inserts 62
19.3 Contact/clamping surfaces — Orientation 62
19.4 Chamfers and roundings 62
20 Attributes of surfaces — Visualization of the model features 62
21 Structure of the design elements (tree of model) 62
22 Data exchange model 63
Annex A (informative) **Information about nominal dimensions 65**
Bibliography 66

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT), see the following URL: Foreword — Supplementary information.

The committee responsible for this document is ISO/TC 29, *Small tools*.

ISO/TS 13399 consists of the following parts, under the general title *Cutting tool data representation and exchange*:

— *Part 1: Overview, fundamental principles and general information model*

— *Part 2: Reference dictionary for the cutting items* [Technical Specification]

— *Part 3: Reference dictionary for tool items* [Technical Specification]

— *Part 4: Reference dictionary for adaptive items* [Technical Specification]

— *Part 5: Reference dictionary for assembly items* [Technical Specification]

— *Part 50: Reference dictionary for reference systems and common concepts* [Technical Specification]

— *Part 60: Reference dictionary for connection systems* [Technical Specification]

— *Part 80: Creation and exchange of 3D models — Overview and principles* [Technical Specification]

— *Part 100: Definitions, principles and methods for reference dictionaries* [Technical Specification]

— *Part 150: Usage guidelines* [Technical Specification]

— *Part 201: Creation and exchange of 3D models — Regular inserts* [Technical Specification]

— *Part 202: Creation and exchange of 3D models — Irregular inserts* [Technical Specification]

— *Part 203: Creation and exchange of 3D models — Replaceable inserts for drilling* [Technical Specification]

— *Part 204: Creation and exchange of 3D models — Inserts for reaming* [Technical Specification]

— *Part 301: Concept for the design of 3D models based on properties according to ISO/TS 13399-3: Modelling of thread-cutting taps, thread-forming taps and thread-cutting dies* [Technical Specification]

— *Part 302: Concept for the design of 3D models based on properties according to ISO/TS 13399-3: Modelling of solid drills and countersinking tools* [Technical Specification]

— *Part 303: Concept for the design of 3D models based on properties according to ISO/TS 13399-3: Modelling of end mills with solid cutting edges* [Technical Specification]

— *Part 304: Concept for the design of 3D models based on properties according to ISO/TS 13399-3: Modelling of milling cutters with arbor hole and solid cutting edges* [Technical Specification]

— *Part 307: Creation and exchange of 3D models — End mills for indexable inserts* [Technical Specification]

— *Part 308: Creation and exchange of 3D models — Milling cutters with arbor hole for indexable inserts* [Technical Specification]

— *Part 309: Creation and exchange of 3D models — Tool holders for indexable inserts* [Technical Specification]

— *Part 311: Creation and exchange of 3D models — Solid reamers* [Technical Specification]

— *Part 312: Creation and exchange of 3D models — Reamers for indexable inserts* [Technical Specification]

— *Part 401: Creation and exchange of 3D models — Converting, extending and reducing adaptive items* [Technical Specification]

— *Part 405: Creation and exchange of 3D models — Collets* [Technical Specification]

The following parts are under preparation:

— *Part 70: Graphical data layout — Layer settings for tool designs* [Technical Specification]

— *Part 71: Graphical data layout — Creation of documents for the standardized data exchange — Graphical product information* [Technical Specification]

— *Part 72: Creation of documents for the standardized data exchange — Definition of properties for drawing header and their XML-data exchange* [Technical Specification]

— *Part 305: Creation and exchange of 3D models — Modular tooling systems with adjustable cartridges for boring* [Technical Specification]

— *Part 310: Creation and exchange of 3D models — Turning tools with carbide tips* [Technical Specification]

Introduction

This part of ISO/TS 13399 defines the concept, the terms and the definitions on how to design simplified 3D models of end mills for indexable inserts that can be used for NC-programming, simulation of the manufacturing processes and the determination of collision within machining processes. It is not intended to standardize the design of the cutting tool itself.

A cutting tool is used in a machine to remove material from a workpiece by a shearing action at the cutting edges of the tool. Cutting tool data that can be described by ISO/TS 13399 (all parts) include, but are not limited to, everything between the workpiece and the machine tool. Information about inserts, solid tools, assembled tools, adaptors, components and their relationships can be represented by ISO/TS 13399 (all parts). The increasing demand providing the end-user with 3D models for the purposes defined above is the basis for the development of this series of International Standards.

The objective of ISO/TS 13399 (all parts) is to provide the means to represent the information that describes cutting tools in a computer sensible form that is independent from any particular computer system. The representation will facilitate the processing and exchange of cutting tool data within and between different software systems and computer platforms and support the application of this data in manufacturing planning, cutting operations and the supply of tools. The nature of this description makes it suitable not only for neutral file exchange, but also as a basis for implementing and sharing product databases and for archiving. The methods that are used for these representations are those developed by ISO/TC 184/SC 4 for the representation of product data by using standardized information models and reference dictionaries.

Definitions and identifications of dictionary entries are defined by means of standard data that consist of instances of the EXPRESS entity data types defined in the common dictionary schema, resulting from a joint effort between ISO/TC 184/SC 4 and IEC/TC 3/SC 3D, and in its extensions defined in ISO 13584-24 and ISO 13584-25.
